Position: Senior SAP APO Business Analyst
Hours: Full-time

Employer: Semtech Corporation
Jobsite: Camarillo, CA

Ensure project quality by adhering to standards in development, testing, and quality methodologies in assuring integrative systems for semiconductor products. Use SAP Supply Chain Management Advance Planning & Optimization (SCM APO) to develop and document detail design and configuration of the business process utilizing experience in business analysis/SAP. Configure and support the APO and Supply Chain Management system to facilitate above business processes. Implement and support end-to-end supply chain planning solutions in SAP APO Demand Planning (SAP APO DP) with experience in integration with Integrated Business Planning (IBP), SAP APO Supply Network Planning (SAP APO SNP) with experience in Capable-to-match (CTM), and SAP APO Global Available to Promise (SAP APO gATP). Design, configure, and maintain CIF Integration Models for SAP APO gATP functionalities, including global availability for online order management, GATP rules based ATP, and backorder processing (BOP). Configure and implement DP InfoCubes using Administrative Workbench, generating and changing CVCs, planning books, data views, planning areas, key figures, macros and creating statistical forecast. Use knowledge of SNP aggregate planning process, configuration of SNP master profile, SNP Deployment and Distribution requirement planning to resolve long term planning issues. Use Accelerated SAP (ASAP) methodology for all phases of project implementation. Develop functional specifications for reports, forms, interfaces, modifications and data conversions. Develop and maintain safety stock, and define models for inventory optimization. Work closely with other project team and support team members to understand integration between APO and other ECC modules. Work with other locations on the coordination of global business process development and SAP configuration settings. Ensure the solutions are tested properly and signed off by super users before the system changes are moved to production environment. Diagnose program errors and debugs with ABAP resources and provide the correction with accurate solutions or fixes. Identify opportunities to use specific functional capability to improve the business processes and operational efficiency with SAP system. Evaluate the system strategies related to new SAP R/3 components and/or SAP new dimension product implementation and recommend new initiatives when justified.

Requirements:

1. Master's degree in Computer Science, Engineering, or related plus 3 years of experience in semiconductor field in business analyst/SAP consultant role.

OR

Bachelor's degree in Computer Science, Engineering, or related plus 5 years of progressive, post-baccalaureate experience in semiconductor field in business analyst/SAP consultant role.

2. Qualifying experience must include 3 years of experience: working in semiconductor field in business analyst/SAP consultant role; SAP APO Demand Planning (SAP APO DP); SAP APO Supply Network Planning (SAP APO SNP); Capable-to-match (CTM); SAP APO Global Available to Promise (SAP APO gATP); CIF Integration Models; Accelerated SAP (ASAP).
