

Hi, my name is Will Hollins, I'm a third year mechanical engineering student at the University of Manitoba and founder of Key Components 3D Printing and Design. I'm the son of CGSA Master Superintendent Greg Hollins at the Fort William Country Club in Thunder Bay, Ontario, where I have been employed for six years alongside him. Recently, we've been brainstorming solutions to some problems encountered by superintendents out on the course.

"I am consistently looking for efficiencies. I've always wanted an irrigation key on hand, or in my pocket, at all times!" *Greg Hollins*

To solve this problem, I have since designed the "Pocket Keys," a compact 3D printed irrigation key. My product benefits are:

- Lightweight
- Pocket-sized
- Affordable
- Long lasting
- Available for both Toro and Rainbird sprinkler heads
- Made in white for high visibility
- Customizable for logos

These sprinkler head keys are already proudly used by 40 golf courses all across Canada, the United States, and Australia. For more information and/or to place an order, visit keycomponents3d.ca. Also check out our other product, the "Billy Goat" Bunker Bike Plow Attachment.
