

Hello,

We are seeking assistance from golf course superintendents on a [WinterTurf research project](#) focused on understanding winter stresses of turfgrass so that we can develop easy-to-implement solutions for turfgrass managers in cold climates. Our objectives include developing best management practices to prevent and recover from winter injury, breeding more winter hardy turfgrass species, and exploring alternative snow mold control strategies.

For this to be successful, we need to enlist the help of hundreds of golf courses located in cold climates throughout the world. **Unfortunately, we don't have much participation in your group's region (see the image below), and we are looking for superintendents who might be able to help with data collection for the 2024-2025 winter season.**

If you are willing to have someone from our WinterTurf research group draft an email to send out to your listserv, write an article to be featured in your newsletter, or reach out in some other way to try and recruit participants in your area, please let me know! Or, if you have specific superintendents who you think might be interested, and who have experienced winter damage in the past, we would be happy to reach out directly if you can provide contact info.
