

For Immediate Release

Turf Prophit™ Mobile Goes Live

Guelph, ON [June 9, 2020] – Turf Prophit™ is pleased to announce the launch of Turf Prophit Mobile. Turf Prophit Mobile allows entire maintenance teams to access their task management, fuel logging, pest and fertilizer applications, online health and safety, and other online documentation direct from their smart phone.

"We are thrilled to be able to deliver this tool to our existing clients particularly with COVID-19 distancing protocols in place. When the pandemic hit, we knew that we had to act quickly to make sure the safety of our customer's maintenance teams was not jeopardized." said John R. Bladon, Director and COO, Turf Prophit. "Without having to interact with community tablets or computer terminals, this virtually eliminates the risks with system use during the current pandemic.

"This is also great news for our international "Powered by Turf Prophit" partners and distributors as they seek to add value for their client bases. This news further reinforces our best in class approach." said Bladon.

Turf Prophit is the turfgrass industry's leading software solution and is a simple, easy to use, and effective tool that uses touch technology to enhance the approach to turfgrass maintenance. Its secure cloud-based database is available for tablets, desktop, and now mobile access.
