

MULTIMAT GOLF COURSE PROTECTION SYSTEM NOW AVAILALE IN CANADA

It may be only 11.5cm wide and 39.5cm long, but since its introduction in 1998, the MULTIMAT has proved to be a real winner on golf courses during the winter months.

Made from a unique durable plastic, the MULTIMAT allows golf clubs to provide play for members during adverse weather conditions without ruining the course. Instead of fairways being riddled with divots, players simply place their ball on the MULTIMAT, and continue playing from within a few inches of where their ball landed.

“The MULTIMAT is not only durable, it also has 2 consistent playing surfaces, so players have no need to adjust their playing style,” said Fairway Products Managing Director Jason Straccia. “It has several unique design features which prevent ball movement, even on slopes and it also lasts and lasts. We have supplied MULTIMAT to protect the courses prior to several Open Championship. This is a one off purchase for most players, and it brings so many benefits to the golf clubs.”

Those benefits to golf courses are immeasurable. Not only are members kept happy by being able to enjoy golf all year round, much needed revenue is generated by increased traffic in all areas of the club. The MULTIMAT can also help clubs to run more efficiently and make savings as course maintenance bills are reduced by up to 20%. If golfers create divots during winter, the grass does not grow back and the course can look like a battlefield by springtime. With MULTIMAT, divot damage is reduced to a minimum and both clubs and members are happy.

“Our distribution service is second to none,” said Jason, “We really do cover the length and breadth of the country next stop - Canada”.

“Clubs interested in MULTIMAT should visit our website where they will find full details, generous discounts for larger orders and our full range of innovative golf course products. We have everything from flags and hole cups to bunker rakes.”
