

# How to Analyze Medicaid Data to Inform Quality and Cost Improvement in Systems of Care

Thursday, July 25, 2019

1:30-3:00 PM ET

Medicaid is the primary funding source for behavioral health care for children, youth, and young adults. This web event will focus on the importance of analyzing Medicaid data to understand Medicaid service use and cost more clearly. Information will be provided on how to structure an analysis of Medicaid data pertinent to children with behavioral health challenges using Medicaid Analytic eXtract (MAX) data. The presenter will illustrate:

- The kind of information available through a Medicaid data analysis,
- How this data can be used to track child behavioral health service utilization and expenditures, and
- Opportunities to improve quality and cost outcomes for this population through better understanding of Medicaid use and expense.

## PRESENTER

**Sheila A. Pires, MPA**  
Managing Partner  
*Human Service Collaborative;*  
Senior Program Consultant  
Center for Health Care  
Strategies  
*Child Health Quality and  
Children in Managed Care  
Programs;*  
Core Partner  
*National TA Network for  
Children's Behavioral Health*

## MODERATOR

**Abram Rosenblatt, PhD**  
Project Director  
CMHI National Evaluation  
*Westat*
