

Recent work completed at the Club during our closure:

Trustee Charles “Bunky” Perko (with the help of his wife Barb and sons Justin and Nate)

- Mop sink relocation – installed a new drain line and water supply so that the mop sink could be moved.
- Installation of a new stainless-steel utility sink where old mop sink was located. This is a significant improvement for Food Safety in the kitchen.
- Installed new faucet in Ladies’ room sink.
- Replaced tank seals on toilet in Ladies’ room. (Leak was discovered by **Steve Hajko** during a routine Club maintenance check.)
- Installed a powered light in the fireplace to replace the temporary battery ones that had been installed for Easter egg sales.
- Removed the ballasts and old tubes from the Liederkrantz sign mounted on a pole by road. LED tubes were retro fitted into fixture. (Thanks to **Joe Eckenrode** for allowing use of his lift.)
- Repaired dusk to dawn flood light mounted above club door entrance.
- Repaired pavilion water system leaks and UV system safety solenoid valve.
- Managed the project to have underground electrical service installed for the pavilion. This was a very significant SAFETY improvement. The pole by the pavilion was rotted half-way through at the ground level. The guide wire was a trip hazard during fests. If the pavilion area would ever be flooded, the power can now be turned off at the parking lot and PPL can service the pole from the parking lot.

Trustee Denny Wertz and a Team of the “Four O'clock Guys”

- Power-washed the entire pavilion.
- They are now getting ready to repair the pavilion roof.
- After the roof is repaired, they will the repair cracks in the pavilion floor.

Members Dale Schultz & Lori DePorter

- Are painting the Club entrance / lobby area.
- Will also be painting the bathrooms and bar area.

Member Art Arnold

- Is refurbishing the window boxes and should have them re-hung soon.
- Power washed the Kitchen trash cans to remove old debris and heavy built-up grease.
- He will then work on a re-building another one bar section that had been retrieved from the woods downstream from the Club after the flood last year. Last year, Art rebuilt two bar sections in the “half-timbered” style similar to many buildings that can be seen throughout Germany and Switzerland.
