

YELLOWSTONE AVE.

CONCRETE REPLACEMENT

The Idaho Transportation Department is designing plans to replace the roadway concrete in two sections of Yellowstone Avenue (US-91) in the cities of Pocatello and Chubbuck.

THE TWO SECTIONS ARE:

- Highway Avenue to E Burnside Avenue in Chubbuck
- Hurley Drive to south of Flandro Drive in Pocatello

The design will include replacing the damaged concrete slabs and repairing the cracks and seal joints.

The existing concrete in the project area hasn't been rehabilitated since 2008 and has reached the end of its service life. The new concrete will serve the public for the next 20 years.

ANTICIPATED PROCESS AND SCHEDULE

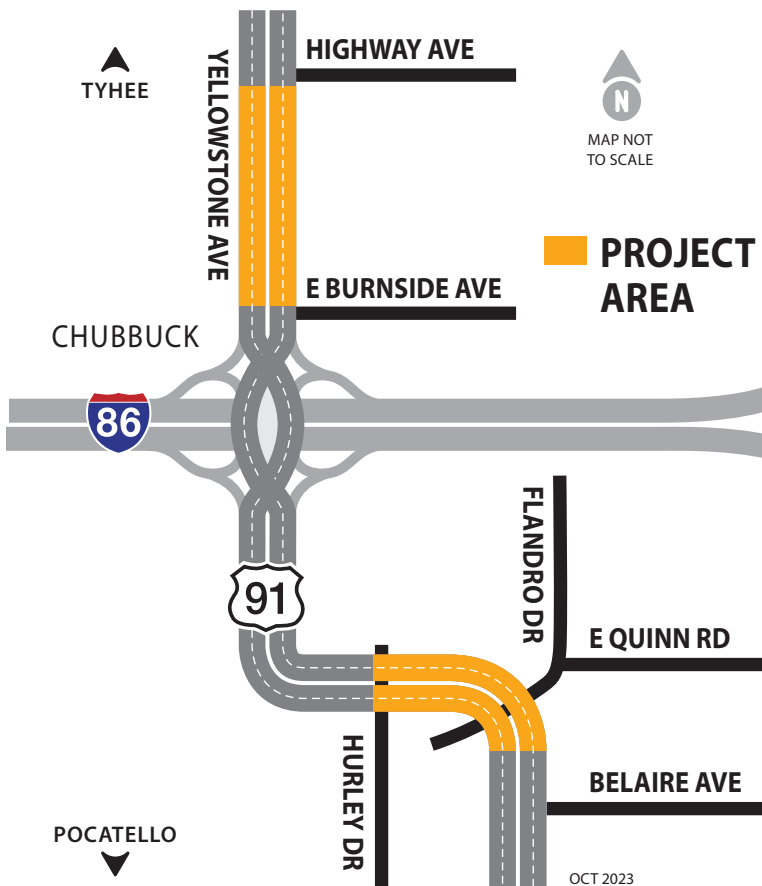

Design work begins	2023
Technical analysis and construction methods identified	2023
Public open house	Early December 2023
Ongoing public communication	2023–2025
Construction begins	2025

PUBLIC INVOLVEMENT

Public involvement is important to the success of this project. Opportunities for public comment will be available through the project website and during public meetings held in the Pocatello and Chubbuck area.

ITD is evaluating using High Early Strength Concrete in select places along Yellowstone Avenue during construction. This method requires less cure time for the concrete to set and dry, which is more convenient for business and residential approaches, especially those with only one entrance.
