

### Experience – IASIS MicroPulse Neurofeedback ( MPN)

A technology to help rebalance the brain with small electronic impulses mimicking the brains actual brain waves, like a mirror image. These signals are sent to an EEG processor through a computerized program which gently nudges the brain resulting in a reorganization and release of blocked patterns in a subtle and elegant way. The Brain will naturally reconnect and rebalance by creating new neural pathways; Neuroplasticity.

### What type of conditions does (MPN) help?

#### All Conditions where the brain is stuck in dysfunctional patterns.

- Panic Attacks – Anxiety- PTSD
- Bi-Polar Disorder
- Sleep Disorders, Eating Disorders
- EMF Sensitivities, Lyme Disease
- Emotional Disturbances of Anger, Rage
- Depression, Flat Emotions, Social Withdrawal
- Concussions, Seizures, Poor Memory
- Strokes, brain, cranial structure issues
- Parkinsons, Cancer, Epilepsy
- Raynauds, Migraine
- Hypervigilance , Sadness

- Obsessive Compulsive Behaviors
- Addictions- tobacco, alcohol, drugs, marijuana, medication
- Brain Fog, Brain Injury
- Cognitive Dysfunction
- ADHD/ ADD, Learning Disabilities, Dyslexia
- Autism Spectrum Disorder
- Unable to do more than one thing at a time
- Following Conversations; Retain Reading
- Clarity issues- Thinking and mental estimates
- Fatigue and Pain conditions - fibromyalgia, chronic fatigue, chronic pain, neuro-inflammatory states

### What can be expected after treatment?

The nervous system recalibrates and stabilizes, giving the individual the ability to be more resilient, responsive, and grounded. After successful treatment, prescription drugs may often be reduced or discontinued with professional guidance. IASIS does not train the brain like traditional neurofeedback, but instead “dis-entrains” the brain by allowing it to reorganize itself and release itself from frozen, stuck patterns

It is common for a patient to plateau with traditional neurofeedback and then experience additional progress utilizing IASIS MicroPulse Neurofeedback. IASIS is also much more efficient in terms of reducing the number of sessions to achieve results and to sustain change.

Over 85% of clients who respond to treatment are by their own assessment very meaningfully helped.
