

2015 IECC Commercial 101 & Historic Buildings

Bringing Back Main Street

Jason Vandever - SPEER
Energy Code Program Manager
jvandever@eepartnership.org

- REEO – Regional Energy Efficiency Organization
- Member-based, non-profit 501(c)3 organization
- 50+ members from wide cross section of E.E. industries

Agenda

- Construction Codes 101
- Energy Code in State Law
- Energy Code 101
- Existing and Historic Building Considerations
- Q & A

Oldest Code?

What is a Code?

Code of Hammurabi – 1754 BC

- 282 Laws – contract, wages, inheritance, construction...
- #229. If a builder build a house for some one, and does not construct it properly, and the house which he built fall in and kill its owner, then that builder shall be put to death. #230. If it kill the son of the owner the son of that builder shall be put to death.

Code of Hammurabi

A side view of the stele "fingertip".

IECC Code Development Process at National Level

Energy Use by Sector

History of U.S. Energy Code Revisions

Why Care About Energy Use in Buildings

4 of the top 5 fastest growing cities are in Texas

Texas Energy Consumption

Projected TX Population Growth

Benefits of Building Energy Codes

**\$ Net Savings:
Homeowners**

Environmental

**Health &
Comfort**

**\$ Savings:
Public**

Homebuyer Cash Flow – Climate Zone 2

	Incremental Cost of moving from 2009 IECC to 2012 IECC = \$1,995 + \$32 for 2015 IECC	Annual	Monthly
A	Downpayment and other up-front costs (one time)	\$ 165.00	N/A
B	Energy Savings (year one)	\$ 207.00	\$ 17.25
C	Mortgage increase	\$ 90.00	\$ 7.50
D	Net cost of mortgage interest deductions, mortgage insurance, and property taxes (year one)	\$ 4.00	\$ 0.33
E	Net Cash Flow (Savings) =[B-(C+D)]	\$ 113.00	\$ 9.42
F	Years to positive savings, including up front costs =[A/E]	1.5	N/A

**Cost-Effectiveness Analysis of the 2009 and 2012 IECC Residential Provisions – Technical Support Document, April, 2013 and National Cost-Effectiveness of the Residential Provisions of the 2015 IECC, June 2015.*

Adoption of Codes in Texas

- SECO has the authority to adopt new editions of International Energy Codes

Chapter 388: Texas Building Energy

§388.003 – The State Energy Conservation Office (SECO) has the authority to determine, based on the recommendations of Texas A&M Energy Systems Laboratory (ESL), whether to adopt more stringent editions of the IECC and IRC, Chapter 11.

34 Texas Administrative Code

§19.53

Effective November 1, 2016, the International Energy Conservation Code, as it existed on May 1, 2015, is adopted as the energy code for use in this state for all residential, commercial, and industrial construction that is not single-family residential construction under subsection (a) of this section.

Local Ordinances

- Texas is a “home rule” state allowing local jurisdictions to adopt amendments to the energy code.
- To amend the state code in non-attainment and affected counties, the amended code must be as stringent as the existing state codes.
- Local jurisdictions are responsible for building energy code implementation and enforcement.

Updating Compliance by Jurisdictions

220 of the Largest Cities	2014	2015	2016	2017	2018
Earlier than 2009 E-code	48	28	24	19	12
Adopted 2009 E-code	108	98	68	46	16
Adopted 2012 E-code	64	86	65	54	37
Adopted 2015 E-code		8	63	101	152*

– current as of 9/17/18

Overview

- 2015 IECC- Ch. 1 & 3 General Requirements
 - Climate Zones
 - Construction Documents
- 2015 IECC- Ch. 4 Commercial Energy Efficiency
 - C401 General
 - C402 Building Envelope Requirements
 - C403 Building Mechanical Systems
 - C404 Service Water Heating
 - C405 Electrical Power and Lighting Systems
 - C406 Additional Efficiency Package Options
 - C407 Total Building Performance
 - C408 System Commissioning
- 2015 IECC- Ch. 5 Existing Buildings

Texas Climate Zones

Texas includes climate zones 2, 3 and 4. Climate zones are based on historical heating and cooling degree days and precipitation

Climate Zones:

2A	Hot-humid
2B	Hot-dry
3A	Warm-humid
3B	Warm-dry
4B	Mixed-dry

IECC Commercial Compliance Options

1

ASHRAE 90.1-2013

OR

2

2015 IECC - **Prescriptive**

- C402 - Envelope
- C403 - Mechanical
- C404 - SWH
- C405 - Lighting

AND

- Pick One Efficiency Option in C406:

OR

3

2015 IECC - **Performance**

- C407 – Total Building Performance
- C402.5 – Air Leakage
- C403.2 – Provisions applicable to all mechanical systems
- C404 - SWH
- Lighting Mandatory Sections
 - C405.2
 - C405.3
 - C405.4
 - C405.6
- Building energy cost to be $\leq 85\%$ of standard reference design building

65

Component Performance Alternative

(C402.1.5)

Alternative component performance path for commercial buildings allows trade-offs among *building envelope* components.

$$A + B + C + D + E \leq \text{Zero}$$

(Equation 4-2)

A = Sum of the (UA Dif) values

B = Sum of the (FL Dif) values

C = Sum of the (CA Dif) values

D = $(DA \cdot UV) - (DA \cdot U_{\text{Wall}})$, but not less than zero

E = $(EA \cdot US) - (EA \cdot U_{\text{Roof}})$, but not less than zero

Prescriptive Tables

OPAQUE THERMAL ENVELOPE INSULATION

CLIMATE ZONE	1		2		3		4
	All other	Group R	All other	Group R	All other	Group R	A
Insulation entirely above roof deck	R-20ci	R-25ci	R-25ci	R-25ci	R-25ci	R-25ci	
Metal buildings ^b	R-19 + R-11 LS	R-19 + R-11 LS	R-19 + R-11 LS	R-19 + R-11 LS	R-19 + R-11 LS	R-19 + R-11 LS	F
Attic and other	R-38	R-38	R-38	R-38	R-38	R-38	
Mass	R-5.7ci ^c	R-5.7ci ^c	R-5.7ci ^c	R-7.6ci	R-7.6ci	R-9.5ci	1
Metal building	R-13+ R-6.5ci	R-13 + R-6.5ci	R-13 + R-6.5ci	R-13 + R-13ci	R-13 + R-6.5ci	R-13 + R-13ci	
Metal framed	R-13 + R-5ci	R-13 + R-5ci	R-13 + R-5ci	R-13 + R-7.5ci	R-13 + R-7.5ci	R-13 + R-7.5ci	1
Wood framed and other	R-13 + R-3.8ci or R-20	R-13 + R-3.8ci or R-20	R-13 + R-3.8ci or R-20	R-13 + R-3.8ci or R-20	R-13 + R-3.8ci or R-20	R-13 + R-3.8ci or R-20	R

Light Reduction Controls

Alternating Luminaires

Alternate Dimming

Alternating Lamps

Exceptions:

- Areas with only one luminaire
- Areas controlled by occupancy sensor
- Lighting in daylight zones w/controls
- Corridors, storerooms, restrooms or public lobbies
- Spaces with <0.6 w/ft²
- Spaces with one luminaire < 100 W

Vertical and Horizontal Transportation Systems and Equipment (C405.9)

Elevators

Luminaires ≥ 35 lumens/watt
ventilation fans $\leq 1/3$ watts/cfm
Controls to de-energize fans &
lighting after 15 minutes of nonuse

Escalators & moving walks
ASME's Safety Code for Elevators
and Escalators
Automatic speed reduction
Variable frequency regenerative
drive (750#)

Existing Buildings

- Additions
- Alterations
- Repairs
- Buildings designated as historic

Historic Buildings

C501.6 Historic buildings. No provisions of this code relating to the construction, *repair, alteration*, restoration and movement of structures, and *change of occupancy* shall be mandatory for *historic buildings* provided a report has been submitted to the *code official* and signed by a *registered design professional*, or a representative of the State Historic Preservation Office or the historic preservation authority having jurisdiction, demonstrating that compliance with that provision would threaten, degrade or destroy the historic form, fabric or function of the building.

Existing Buildings

Section C502 - Additions

Any nonconditioned space that is altered to become conditioned space shall be required to be brought into full compliance with this code

Examples:

- ✓ Converting part of an unconditioned warehouse to office space
- ✓ Shell building tenant build-out

Existing Buildings

Section C503 - Alterations

Code applies to any new construction

Unaltered portion(s) do not need to comply

Alterations comply with ASHRAE 90.1-2013 do not need to comply with C402-C405

Vertical Fenestration and Skylight Area similar to requirements for additions

Section C503.2 – Change in Occupancy

Spaces undergoing a change in occupancy that would result in an increase in demand for either fossil fuel or electrical energy shall comply with this code

Intent of the Code
