NOAA's projected temperatures:

February 16, 2026 – Feb. 20, 2026, and Feb. 18, 2026 – Feb. 24, 2026

A = temperatures above normal

N = equal chance that temperatures are above normal, normal, or below normal

B = temperatures below normal

Data source: [NOAA](https://www.noaa.gov), Feb 10, 2026

Petroleum Administration for Defense Districts (PADDs)

- NOAA forecasts a chance of above-normal temperatures for most of the continental U.S. Near-normal temperatures are expected in parts of the Pacific Coast, Upper Midwest, and Florida. Above-normal temperatures are expected to continue for the next two weeks.
- Warmer-than-normal temperatures will result in lower demand in across all PADDs.

Northeast propane prices, generally dictated by tariff on TEPPCO* pipeline, are high enough to pull product from the Gulf Coast and Atlantic Basin

State Heating Oil and Propane Program (SHOPP) updates

- SHOPP is a collaborative program between states and EIA that provides weekly wholesale and retail prices for heating oil and propane at the state level.
- EIA expanded SHOPP in October 2014 to include 14 additional states in propane price data collection. In 2016, EIA added 10 new states to its wholesale propane price publication. This should be taken into consideration when comparing the average prices for the U.S., PADD 1, PADD 1B, PADD 1C, and PADD 2 averages.
- EIA has been providing more granular inventory data to states on a weekly basis since the 2016/2017 heating season.
- EIA implemented two new samples for residential heating oil and propane in October 2019. Under the new [sampling methodology](#), EIA is publishing [standard errors](#) for SHOPP prices.
