Cancer Biostatistics
Walk-In Clinic
Hosted by: TCI- BSRF

1st and 3rd Wednesday 1PM-2PM
Every month starting December 5th

Location: Hess – 6th Floor
Conference Room 122

Need help with your research?
The purpose of this clinic is to answer general statistical questions about current and future research projects including:
• What type of analysis should I conduct?
• How should I design my study?
• What model should I use?

For faculty members, fellows, residents, & students who need QUICK answers
• Clarification of methods utilized in published articles
• Advice regarding data collection
• Guidance on conducting analyses and assistance in interpreting results
• Discussion of manuscript reviews that require revision of statistical methods
• Initiation of discussion for future long-term research collaborations

How to benefit from the Cancer Biostatistics Clinic?
• Be prepared to give a short, informal overview of your project and explain questions you have
• Have a clear idea of what you would like to learn from the clinic
• Be familiar with existing literature
• Be familiar with the type of data you have or will collect, i.e. identify whether data types of variables are nominal, ordinal, continuous, categorical, time to event, etc.

We are unable to fully design studies or run analyses during this time. For additional information on TCI-BSRF resources and guidelines please visit our website: https://icahn.mssm.edu/research/institute-health-care-delivery/tci-biostatistics
