

Please join me in welcoming Katelyn Beeley, RN, to the position of Manager of Clinical Informatics - Medical Affairs. Katelyn has been at Maine Medical Center since 2006, when she started as a phlebotomist. Since then, she has held the roles of trainer and technical training analyst, EpicCare Inpatient ClinDoc/Stork instructional designer and senior training analyst, clinical nurse II and, most recently, clinical informatics specialist. Kate's energy and enthusiasm for clinical informatics and her understanding of how SeHR/EPIC impacts on how we care for patients is second to none. I look forward to working with Katelyn in her new position, and I know she will help all of us provide better care of our patients.

-Adrian Moran, MD, Associate Chief Medical Officer, Maine Medical Center

SeHR/Epic Provider Support Line

Have a “how-to” question? Looking for a refresher on problem-oriented documentation? Have you noticed a new change you would like to review? Looking for guidance with personalization options within the system?

We are available as a resource for you at 662-0999, Monday - Friday, 0800-1600 (excl. holidays).

New Cardiology Advanced Care Planning SmartForm

In order to support the Cardiovascular Service Line goal to increase Advanced Care Planning for adult CHF patients, we have embedded the new SmartPhrase .cardacp at the end of the Cardiac Discharge Summary [MH IP Cardiac Discharge Summary].

The .cardacp SmartPhrase is also available for use in the standard HF clinic note template in order to support coordinated advanced care - care that is demonstrated to improve quality of life and outcomes for these complex patients.

When using this documentation tool, the specific advanced care planning note content will automatically flow into the Advanced Care Planning tab in SeHR/Epic and will populate the ACP Note section.

By Mary McNulty, RN, Senior Director of Case Management & Katelyn Beeley, RN, Manager of Clinical Informatics - Medical Affairs

New Social Work Consult Order

Care Management at MMC is undergoing a change in delivery model to better support the needs of our patients and to optimize the skill sets of our RN and social work team

members. Our social worker care managers are moving out of the discharge planning role into a pure psychosocial role in order to acknowledge and address psychosocial barriers to care progression and throughput. They will be aligned with RN care manager partners on each unit and will be a consult on cases where psychosocial needs are identified by any member of the care team – provider, nurse, care manager, etc.

To facilitate execution of social work support, a revised social work consult order is available in SeHR/Epic called *Inpatient Consult to Social Work (CON1021)*.
