

### **Highlights of upcoming webinars at the Education Institute**

As the library landscape is rapidly changing across Canada, impacting not just your programs and services, the Education Institute is honored to support the library community evolve from this global pandemic.

### **Cognitive Biases and Our Relationship to Information**

**Julie Waddick**

**Tuesday, July 6 | 12:00-1:00 pm ET**

We are living in the information age. In some ways, it is easier than ever to access good quality information quickly and efficiently. But at the same time, we still seem to be plagued by phenomena of misinformation and conspiracy theories. So, what's going on? Our relationship to information seems to run deeper than just access.

In this webinar we will explore some common cognitive biases that we all have, the reasons for them, and the risks there-associated. See how increasing our awareness of these natural blind spots can drive home the importance of being systematic in our thinking and decision-making. As librarians, this deeper understanding can help us help others to understand the importance of things like, systematic reviews, literature searches, evidence-based medicine, etc. It can also help our own work by appreciating the importance of having systematic and objective processes to our own operations.
