

AI for Everyday Life: A Community Literacy Workshop

Library staff-led, in-person. Available nationwide.

AI for Everyday Life is a workshop designed to give newcomers and less tech-savvy adults the hands-on skills to navigate AI tools with confidence. Delivered via an accessible, interactive video series hosted by CBC's Andrew Chang and accompanied by in-class examples and live participation, attendees will learn how to use simple AI tools to plan routines and manage daily "life admin". The session provides actionable steps on writing effective prompts, recognizing AI hallucinations and deepfakes, and safeguarding personal data before sharing. Co-produced in partnership with Vancouver Public Library.

- **Target Audience:** Newcomers and library patrons (adults)
- **Duration:** 60–90 minutes
- **Registration:** Up to 25 participants
- **Participant Requirements:** No device needed
- **Themes & Key Outcomes:** Demystify AI, practice basic prompt writing, spot AI hallucinations and deepfakes, and navigate digital privacy safely
- **Library Tech Requirements:** AV for the presentation (screen and audio for video modules). Printer/copier for producing in-session workshop materials (15-20 pages).
