Technology and Your Game

Discover technologies that can help develop your game! Participants will have the opportunity to experience the exclusive Trackman and the Science and Motion (SAM) Putting Lab to analyze and improve swing dynamics.

Trackman technology uses Doppler radar to monitor three-dimensional clubhead movement and the ball flight from impact to landing. The restricted class size will allow you to make a swing or two and receive immediate feedback from PGA Professional Tom Morton.

Also experience the Science and Motion (SAM) Putting Lab. This lab will help you gain a better understanding of your putting stroke and why one putter style may produce better results over another.

Tom Morton
PGA Director of Player Development

Date & Time

Option 1 – Wednesday, May 26, 2021
5:00 – 6:30 P.M.
