

We are still in the formative stages and are considering a variety of priority areas including:

- Life Course / childhood (and prenatal) origins of adult diseases
- Population Health for Children
- Health systems and system learning (including mindful evaluation)
 - Complex adaptive systems
 - High reliability / safety culture
- Measuring and improving quality
- Social Determinants of Health, Toxic Stress, and ACES
- Primary care - mental health integration
- Building Health Equity and Eliminating Disparities
 - environmental justice
- Community-Engaged Research
- Translating research into practice, and practice into learning

- Improving delivery of coordinated health care, e.g.
 - Discharge planning, linkages from hospital to community
 - Access and availability of care
 - Medication reconciliation and polypharmacy
 - Patient-centered medical home
- High impact clinical areas, e.g.
 - Maternal child health & infant mortality
 - Oral health
 - Asthma
 - Mental Health
 - Obesity and diabetes
