

# OUR GOAL

We wanted to make sure students were safe while in person so we made sure they had access to hand sanitizer

## Timeline

We were able to hand deliver the hand sanitizer to students in one day. Students were also able to get new bottles through out the semester.

## SUCCESS

The best thing was to see students continuing to use them weeks after we handed them out. We also had students who were not in person learners at the time we originally handed them out ask for them when they started to come on campus

## How did we keep their hands clean

We purchased all in person students clip on hand sanitizer that they could keep with them at all times. We also provided a lesson on hand hygiene that was shown for week in home room. This helped educate our remote learners what they can do while at home.

## Key Details

With the grant funds we purchased 300 clip on hand sanitizer bottles. We handed them out as students entered the building and had a survey they would fill out to acknowledge they had a received one.

## Challenges

The link to our survey was a QR code. Students were not familiar with how to use a QR code so we needed to help a lot of students access that.
