

I've been using Passport's AR module for years, and I thought it was working just fine. I finally decided to attend the 'Reporting Done Your Way' webinar, and it opened my eyes to a whole new world! After attending a few more webinars, I knew that I either had to move to SQL or purchase AcuXDBC to extract the reports that I needed.

Turns out that SQL wasn't for me, but AcuXDBC was affordable, and fairly easy to set up. After playing with it on my own, I felt that I needed some extra training. With a couple of hours of training, I have been able to extract my data easily, using Excel or Access.

Rather than scrolling endlessly trying to find part numbers, etc., AcuXDBC can access all my PBS data, using multiple criteria and create just the reports I need.

The search capacity of AcuXDBC is amazing! If I knew what you could do with AcuXDBC, I would have bought it years ago! Believe me, it's worth every penny!
