

Enlist One[®] + Liberty[®] herbicides help conquer tough weed challenges

Successful weed control means keeping weeds at bay throughout the growing season. The Enlist[®] weed control system allows you to employ Enlist[®] herbicides as the cornerstone of a herbicide program approach to overcome your toughest weed challenges. Liberty[®] herbicide is the primary tank-mix recommendation with Enlist One[®] herbicide for acres with high pressure of glyphosate-resistant broadleaf weeds, especially Palmer amaranth, waterhemp and kochia.

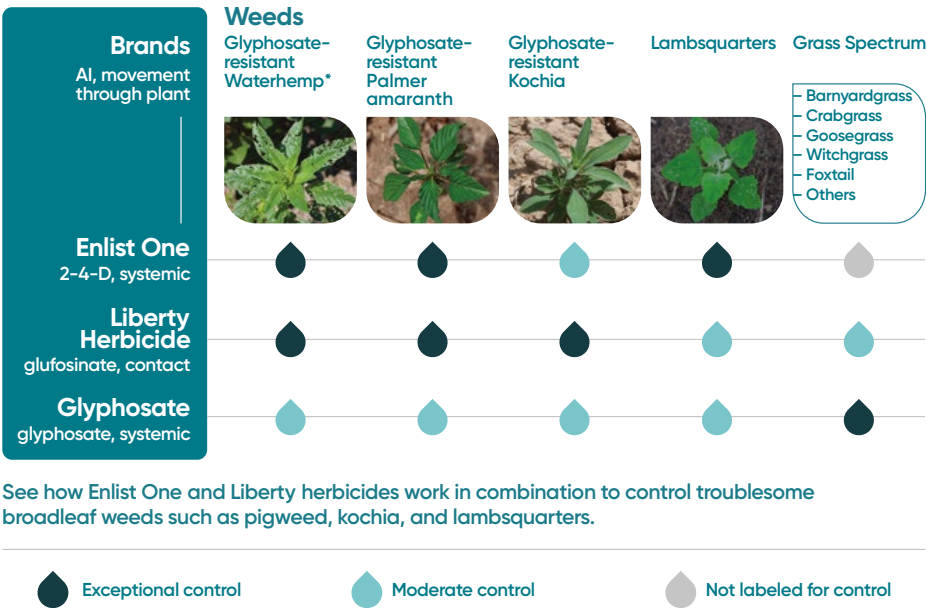

Liberty[®]

Herbicide

- Put Enlist One + Liberty herbicides to work in your fields. See recent trial data¹ to get more information on one of the toughest and most effective postemergence weed control pairings.
- Combination of Enlist One herbicide + Liberty herbicide provides multiple unique, effective sites of action on Enlist E3[®] soybeans acres.
- And, because of the inherent stability of 2,4-D choline, adding Liberty herbicide in the tank with Enlist One herbicide does not increase the potential for volatility due to acidification.

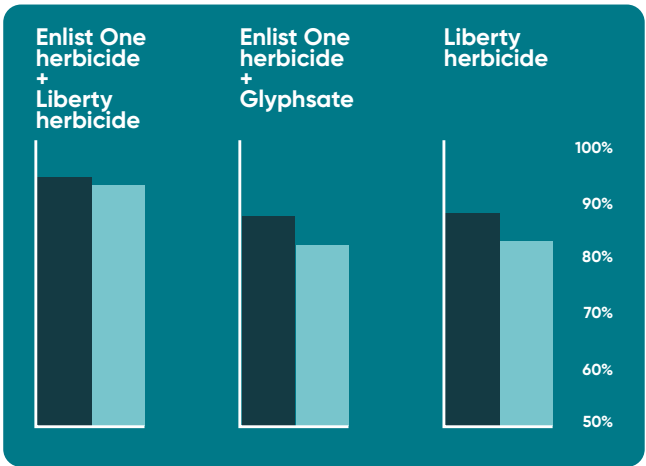

Even these weeds don't stand a chance:

See how Enlist One and Liberty herbicides work in combination to control troublesome broadleaf weeds such as pigweed, kochia, and lambsquarters.

Broadleaf control

Take advantage of multiple sites of action for effective weed control.

■ Broadleaf ■ Pigweed

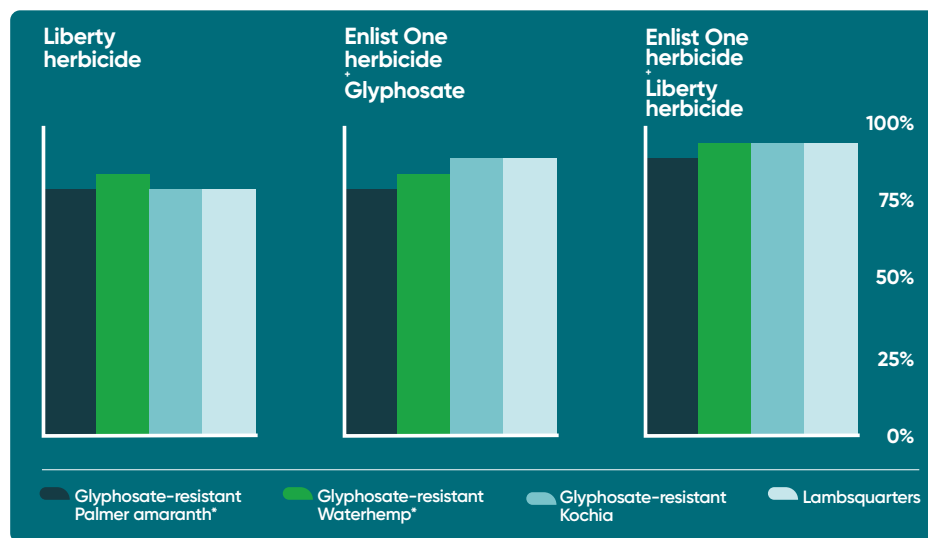

Tank-mix optimization

Rates	Enlist One herbicide:	2 pt./A
	Liberty herbicide:	2 pt./A
Weed height	3 inches tall or less	
Carrier volume	Recommended:	20 GPA
	Min. requirement:	15 GPA with tank-mix of Enlist One + Liberty herbicides
Adjuvants	AMS:	1.5 to 3 lb./A
	May be any combination of qualified dry AMS, liquid AMS or AMS-containing products found on EnlistTankMix.com	
Qualified nozzle selection	Use nozzle and corresponding spray pressure from the qualified list for Enlist One herbicide	
	Optimize coverage with qualified nozzles by using a less coarse nozzle and higher operating pressure	
Weather	At spray: Avoid low humidity and cloudy conditions	
Spraying time	Between two hours after dawn and two hours before sunset	
Wind speed	Max:	10 mph

Use a tank-mix of Enlist One + Liberty herbicides as part of a complete program approach for season-long weed control.

- Start clean with a burndown or tillage.
- Use effective residual herbicides at preemergence and post timings.
- Spray postemergence when weeds are small—3 inches tall or less.
- Use up to two postemergence applications each of Enlist One herbicides and Liberty herbicide.

United, Enlist One and Liberty herbicides are an effective tank-mix against Palmer amaranth and other tough weeds.^{1,2}

The tank-mix of Enlist One+ Liberty herbicides provides >90% control of pigweed and other troublesome broadleaf weeds in joint research.^{1,2}

Similarly, the tank-mix of Enlist One+ Liberty herbicides provides 15% better control of waterhemp and Palmer amaranth compared to Enlist One + glyphosate.^{1,2}

Check out [Enlist.com](https://enlist.com) for more information about Enlist herbicide partners.

*May require a broader management plan including timely application and use of a soil residual herbicide.

¹ Control of 3- to 4-inch waterhemp in 2021 Corteva Agriscience trials with Enlist One herbicide at 32 fluid ounces, Liberty herbicide at 32 fl. oz. and AMS at 2.5 v/v.

² Control of 3- to 4-inch Palmer amaranth in 2021 Corteva Agriscience trials with Enlist One herbicide at 32 fluid ounces, Liberty herbicide at 32 fl. oz., glyphosate DMA at 29 fl. oz. and AMS at 2.5 v/v.
