

## Growing the Corteva Agriscience biologicals portfolio with new acquisitions

The market for biologicals products is growing rapidly—expected to more than triple by 2035—and Corteva Agriscience is positioning itself to become a leader in this space, delivering more innovative and sustainable options to farmers. Biological products consist of materials that already exist in nature. They can include living organisms, like beneficial bacteria, or components, like enzymes, that are derived from natural materials.

Corteva recently expanded its biologicals capabilities and offerings through acquisitions of two leading biologicals companies: Stoller Group, Inc. and Symborg. Stoller, which has a strong reputation for innovation, has been in business for more than 50 years and has a presence in more than 60 countries. Symborg brings expertise in microbiological technologies and a strong pipeline of biocontrol products.

These acquisitions are a natural extension of the kinds of partnerships Corteva has been building with biologicals innovators around the world in recent years. Corteva previously collaborated with Symborg to scale up Utrisha™ N nutrient efficiency optimizer and bring it to market. Utrisha N is a biostimulant product that enables plants to fix nitrogen from the air, supplementing below-ground sources of nitrogen.

Corteva Agriscience CEO Chuck Magro said the acquisitions, “reinforce Corteva’s commitment to bringing differentiated and sustainably advantaged solutions to our customers.” Adding the capabilities of both companies will allow Corteva to deliver valuable solutions to farmers, backed by science and demonstrating proven, predictable performance.

With these acquisitions, Corteva looks forward to bringing farmers more biologicals products that complement conventional crop protection, reduce environmental footprints and meet the needs of the marketplace.

*With the recent acquisitions of Stoller and Symborg, Corteva will be growing its biologicals capabilities, helping to deliver more solutions to farmers that enhance crop health and protection and meet changing marketplace demands.*
