

Enlist One[®] herbicide

Weed control designed to land and stay on target

With the development of proprietary Colex-D[®] technology, Enlist One[®] herbicide gives your customers a leading technology for exceptional weed control that also makes for good neighbors.

With Enlist One, growers can depend season after season upon several key features unrivaled in the industry, which include:

- 90% less drift than traditional 2,4-D when used along with qualified low-drift nozzles
- Near-zero volatility – up to 96% less than 2,4-D ester – which helps keep Enlist[®] herbicides in place while improving control
- A wide application window like your customers are used to with glyphosate
 - For Enlist[®] cotton, up to the midbloom growth stage
 - For Enlist E3[®] soybeans, no later than growth stage R2 (full flower)
 - With Enlist[®] corn, no larger than the V8 growth stage, or 30 inches in plant height
- A consistent application rate of 2 pt./A for glyphosate-resistant and hard to control weeds

Along with these key features of Enlist One, farmers have additional tank-mix flexibility with glufosinate and other tank-mix products, allowing for customized weed control plans for each field and farm. With this tank-mix flexibility, Enlist One delivers:

- 2,4-D choline as the basis for exceptional control of glyphosate-resistant or hard-to-control weeds
- Compatibility to tank-mix with qualified glufosinate, glyphosate, residual herbicides and insecticides
- The ability to customize the ratio of herbicides to match each field's need
- Flexibility to choose varied modes of action to manage weed resistance

When using Enlist One to meet your customers' needs, always be certain to review the most current list of allowable tank-mix products for Enlist One herbicide at [EnlistTankMix.com](https://www.enlisttankmix.com).

With its proprietary Colex-D technology, proven capabilities, wide application window and unmatched ability to stay on target, Enlist One should be a foundational part of your customers' weed control plans season after season.

™ & ® Trademarks of Corteva Agriscience and its affiliated companies. The transgenic soybean event in Enlist E3[®] soybeans is jointly developed and owned by Corteva Agriscience and M.S. Technologies L.L.C. Enlist Duo[®] and Enlist One[®] herbicides are not registered for sale or use in all states or counties. Contact your state pesticide regulatory agency to determine if a product is registered for sale or use in your area. Enlist Duo and Enlist One are the only 2,4-D products authorized for use with Enlist crops. Consult Enlist herbicide labels for weed species controlled. Always read and follow label directions.
