

2021 WAS A GREAT YEAR FOR CORN!

WE CAN'T WAIT TO SEE WHAT THE 2022 CROP BRINGS

No matter how you measure it—by yield or value—corn is our country's biggest agricultural crop. Seed companies like yours deliver the genetics and technologies customers need to get the most from their acres. With last year's success, we're looking ahead to this year's harvest with great optimism.

Last season's corn harvest brought in a record-high national average yield at 177 bushels per acre. It also saw the highest number of acres planted, acres harvested and bushels produced in the last five years.
