

American-Made: Celebrating Our U.S. Roots

In a global agriculture market dominated by multinational corporations, Corteva Agriscience and independent seed companies across the U.S. stand out. U.S.-based and headquartered, they embody the American spirit.

Corteva is one of the world's three largest crop input companies, but we're the only one based in the U.S. Corteva's deep connection to American soil is more than just a matter of geography. It's a commitment to the land, our communities and the values that define our nation.

Here are just some of the ways that Corteva supports American ideals and ingenuity:

★ Innovating for American farms

Corteva's U.S. research and development centers create solutions tailored to the specific needs of American farmers. These innovations remain under U.S. jurisdiction, ensuring that the benefits of domestic research and technological advancements are retained here at home.

★ Ensuring quality and reliability

Our products are designed, tested and manufactured within the U.S., and are held to very high standards. Plus, when addressing a grower's concern or delivering a product, being based in the U.S. ensures that farmers receive the best possible service.

★ Boosting local economies

Corteva's U.S.-based licensing business and partnerships with independent seed companies like yours support local communities and job creation. By investing in local talent, we help pave the way for the next generation of American farmers.

★ Promoting sustainability

Corteva is committed to sustainable farming practices that protect our environment while enhancing productivity. We work with independent seed companies and the farmers they serve as part of our mission to implement environmentally responsible practices that preserve the land for future generations.

As we celebrate Independence Day, take a moment to recognize the value and importance of American companies. At Corteva, we're delighted to be able to help contribute to your success and a bright future for American farmers.
