

Top corn herbicide solutions for 2023

Start the season off strong

Kicking off the year with a clean burndown ensures cornfields are ready to plant and enhances the performance of postemergence herbicide applications later in the year. The following corn herbicides can provide optimum results from 28 days before planting until initial plant emergence:

- **Resicore® XL herbicide:** Boasting three proven modes of action, Resicore XL controls more than 75 broadleaf and grass weeds to increase crop safety and flexibility on corn up to 24 inches tall. Resicore XL also is compatible with a variety of tank-mix partners, including micronutrients, atrazine, glyphosate and other corn herbicides.
- **SureStart® II herbicide:** SureStart II controls more than 60 broadleaf weeds and grasses, including marestail, common and giant ragweed, waterhemp, pigweed and glyphosate-, triazine- or ALS-resistant weeds.
- **Keystone® NXT herbicide:** Keystone NXT consistently controls foxtail, barnyardgrass, crabgrass, waterhemp, pigweed, lambsquarters and nightshades with only ¼ inch of rain required for activation.
- **FulTime® NXT herbicide:** FulTime NXT delivers time-released control of foxtail, black nightshade, waterhemp and other problem weeds in no-till, reduced tillage and fields with heavy residue.
- **Surpass® NXT herbicide:** Surpass NXT provides early season residual control of common grasses and small-seeded broadleaf weeds.

Enhancing postemergence control

To maximize weed control after planting, consider a postemergence application of Kyro™ herbicide. Kyro is the first corn herbicide to combine the three proven modes of action of acetochlor, clopyralid and topramezone in a single premix for both postemergence and residual control of more than 65 of the toughest broadleaf and grass weeds.

The strong in-season postemergence activity of Kyro complements farmers' existing preemergence corn herbicides, making it a perfect fit in a two-pass program approach with the other Corteva Agriscience™ brand corn herbicides listed above.

From preplant to postemergence, corn herbicides from Corteva Agriscience can give your customers power over weeds. Consider the following solutions for the 2023 growing season.

Corn herbicide application flexibility

Herbicide recommendations will vary by soil texture/pH, always read and follow label directions.

2-PASS PROGRAM OPTIONS

Preplant to preemergence herbicides

28 days preplant up to plant emergence
(Select one of the products listed below)

FIRST PASS

Resicore[®] XL	1.5-1.75 qt	Keystone[®] LA NXT	1.3-2 qt
Resicore[®]	1.5-1.75 qt	FulTime[®] NXT	2.9-3.7 qt
SureStart[®] II	2-3 pt	Surpass[®] NXT	1.25-2.75 pt
Keystone[®] NXT	1.5-2.5 qt		

Postemergence

(Select one of the products listed below)

SECOND PASS

Resicore	1.25-1.5 qt
SureStart II	2 pt

Realm[®] Q	4 oz
----------------------------	------

Resicore XL	1.4-1.5 qt
Kyro[™]	35 - 60 fl oz

Preplanting/Planting	Planting	VE	V2	V4 (11" height)	V6 (20" height)	V8 (30" height)
----------------------	----------	----	----	--------------------	--------------------	--------------------

1-PASS PROGRAM OPTIONS

Preplant herbicides

28 days preplant up to plant emergence

OPTION 1

Resicore XL	2.5-3 qt
Resicore	2.5-3 qt

Preemergence

OPTION 2

Resicore XL	2.5 qt
Resicore	2.5 qt
or SureStart II	2-3 pt

Postemergence

OPTION 3

Resicore	2 qt	or SureStart II	2 pt
Resicore XL	2.5 qt		

Application window
