ISN to XWA Tenant Moves

Moving activity planning is shifting to move preparation. Tenants, have you identified those items you are moving, replacing, or eliminating within your area of purview? Now is the time to purge items being replaced or eliminated. We will be walking through your areas to assist in this process in order to verify the extent of the goods being moved. Some tenants have asked about the disposal of small appliances, computers, and electronic items. If you have any of those items that require disposal please contact Airport Operations for collection. For the next few weeks, there is a dumpster located near the Operations Maintenance garage for metal items being eliminated prior to moving to XWA. Take a good look through your spaces and purge items early. A Shredding event is also being planned, so start going through your files now and set them aside for the shredding event.

ARFF Training

Airport Operations and Fire Dept personnel recently conducted required ARFF training in preparation for the move to XWA. The training included live fire exercises on simulated aircraft, which generated the smoke that was evident to the public last week.

105 Days!

105 days remain before before XWA takes flight. Escalator and elevator installations will be starting soon and work on the terrazzo floor is continuing. The exterior panels and finishes are in place on the front of the terminal, which can be seen in the image on page two. A major improvement underway this week has been the paving of County Road (CR) 7. Work continues, but CR 7 is paved from SR 85 all the way to the airport entrance road (Jensen Lane). In fact, both Jensen Lane and the commercial parking lot are also taking shape. The truck activity on and around the site remains high and requires constant awareness when driving or walking on site. Another project going vertical this past week is Overland Aviation's FBO facility and just today the first steel beams of their hangar have been erected.

Rumor has it...TSA will hand screen checked bags at XWA.

FALSE!

False is outstanding news! Earlier this week TSA confirmed that XWA will be receiving an inline baggage screening machine. This will greatly enhance TSA screening services by eliminating hand screening of each and every bag and provide a much anticipated upgrade in technology at XWA from day one.

Quick Fact:

The security perimeter fence around the airport is approximately 30,000 Linear Feet, or 5 ½ miles long. The entire area within this fence is referred to as the Airport Operations Area, commonly called the AOA.

Volunteer Reminder

Reminder, volunteers of all ages and abilities are vital to verifying the new airport is ready for travelers on day one. It takes a fresh set of eyes to ensure airport signs are properly placed and easy to understand. Volunteers are invited to assist the airport in running trials and simulations. These simulations will involve both the departing passenger and the arrival passenger viewpoints, which will cover everything from the parking lot to the aircraft and all stops in between. The community is encouraged to assist in this effort and enjoy a first look at their new terminal. Please share this request with family and friends and then contact Melinda Rasmussen to get your name on the list.

Airport Operational Readiness (AOR)

AOR projects focus not only on the construction of your new airport, but also on the technology, processes, and people inside. It is the responsibility of Chrysalis Global Aviation to ensure the systems, processes, people, and assets are organized and fully prepared for the move of operations to the new airport.
