

Enhancements and Fixes

Brief Description	Current Experience	New Experience
Bid Opening Date countdown clock	Unavailable	A countdown clock is displayed to public users and logged-in vendors when viewing Bids that are open for response. The countdown clock is a clear reminder of the Bid Opening Date (due date).
Tag for required bid documents	Unavailable	New ability for buyers to tag required documents and ensure these attachments are included in vendors' responses.
Specify end date for COMMBUYS Q&A	Unavailable	New functionality for buyers to set a "Close Q&A for Vendor Date" and preset an end date for COMMBUYS Q&A. After this date, vendors are not able to submit new questions; however, existing questions/answers are visible.
Extra line item created in bids when using a ≥8-digit commodity code	An extra line item is created on a bid solicitation when using a ≥8-digit UNSPSC.	The system no longer adds extraneous line items with extended UNSPSCs.
Consistent experience across bid types when selecting Disable Pricing	When selecting Disable Pricing, Items do not default to See Quote Attachments for Open and Rolling bid types.	All bid types (Standard, Open, and Rolling Enrollment) default to See Quote Attachments when buyers select Disable Pricing. This fix provides a consistent experience across all bid types and prevents vendors from accidentally marking items as No Bid.
Improved password reset experience	During password resets, users may inadvertently add a space at the end of their new password and experience issues logging into the system when the additional space is omitted.	The system automatically removes spaces at the end of password resets to optimize the password reset experience.
Improved PunchOut experience for buyers connected with multiple organizations	When buyers who are linked to multiple organizations PunchOut from vendors' websites, the system is not able to identify the originating organization.	Improved PunchOut functionality links the PunchOut requisition to the correct organization and displays the buyer's organization to vendors.
No need to reenter dollar discounts on Requisitions	When dollar discounts are entered for Requisition Items, discount percentages are inaccurately calculated and buyers need to reenter correct dollar discounts.	Dollar discounts entered by buyers are not recalculated.

Enhancements and Fixes - Continued

Brief Description	Current Experience	New Experience
Public Advanced Search display Improvement	Some Advanced Search results are presented in overlapping screens	Advanced Search results are clearly displayed.
In-Progress MBPOs consistently displayed	Internal Advanced Search results exclude in-progress MBPOs that do not have a Control Start and/or End date.	Internal Advanced Searches return in-progress MBPOs, as expected.
Inquiry users able to review G2B blankets	Users with Inquiry privileges are unable to view G2B blankets.	Updated Advanced Search functionality allows Inquiry users to view G2B blanket documents for all organizations.
Catalog or Contract Item Unit Cost changes on Requisitions	Users are not able to edit Unit Cost for Catalog or Contract Items on Requisitions.	Users may edit prices on Requisitions to be lower than Catalog or Contract Items. Unit Cost changes require explanation in the Price Change Reason field.
