

Table of Contents

Chapter 1 – Introducing Applied Econometrics through Smoothing	11
Univariate Smoothing.....	12
Equally-Weighted Smoothing	14
Exponentially-Weighted Smoothing	14
Application: Volume of Bankruptcies.....	15
Seasonal Adjustment	17
Application: Palm Oil Production	20
Chapters 2 -10: Assessing the Influence of Explanatory Variables.....	22
Chapter 2 - Cross-Section Basics.....	23
Explanatory Variables: Exogenous or Endogenous?.....	24
Forming a Model	24
Feature to Model.....	25
Application: Birthweights and Smoking	26
Chapter 3 – Interpreting the Effects of Explanatory Variables	29
Indicator Variables	30
Modeling the Mean with Ordinary Least Squares	31
Collinearity and the Trap.....	34
Multiple Explanatory Variables.....	36
Quadratic Explanatory Variables.....	37
Confidence Intervals.....	39
Interaction Terms.....	40
Causal Effect	41
Chapter 4 – Heteroskedasticity and Inference	43
Tests of Significance with Heteroskedasticity.....	44
Homoskedasticity and Heteroskedasticity.....	45
Testing for Heteroskedasticity	48
Weighted Least Squares	50
Chapter 5 – Moving Beyond the Mean	53
Distribution Features - Quantiles.....	54
Estimation of Quantiles	54
Linear Probability Model.....	56

Chapter 6 – Interval-Coded Data	59
Application: Earnings and Height	60
Correlation	61
Interval Data	61
Modeling Bimodal Data	63
Upper Mode	64
Logit and Probit Models	66
Interpreting the Coefficients of a Logit Model	69
Chapter 7 – Omitted Variables Bias and Instruments	71
Omitted Variable Bias	72
Instrumental Variable	73
Two-Stage Least Squares	73
Determining the Effect of Military Service on Civilian Wages	74
Instrument Relevance	75
Binary Instruments	76
Random Assignment with Compliance	76
Random Assignment with Non-Compliance	77
Non-Random Assignment but a Randomly Assigned Instrument	77
Tests of Hypotheses Associated with Econometric Models	78
Chapter 8 – Omitted Variables Bias and Panel Data	81
Panel Data	82
Panel Data and Omitted Variables Bias	83
Omitted Variables and Error Components	85
First-Difference Models	85
Indicator Variable Models	86
Fixed-Effects Model	88
Test of Significance	90
Project: The Origins of Growth	91
Chapter 9 - Censored Data	95
Overview of Censored Response Models	96
Estimation of the Tobit Model	96
Calculation of the Appropriate Marginal Effects of the Tobit Model	97
The Heckman Sample Selection Procedure	101
Calculation of the Appropriate Marginal Effects for the Heckman Procedure	102
Interpreting Logs and Levels	104

Chapter 10 - Seemingly Unrelated Regression Models	105
The Structural Representation of a SUR Model	106
The SUR Estimation Procedure	108
Interpretation of Coefficients and Tests of Hypotheses	108
Extensions of the SUR Model to Accommodate Autocorrelation	110
Chapter 11 – Simultaneous Systems	111
Preamble to Multi-Equation Models	112
Structural Specification and Analytically-Derived Reduced-Form Specification	112
Simultaneous Equation Model	112
Two-Equation Model	114
Analytically Derived Reduced Forms	115
The Issue of Identification	115
Order and Rank Conditions for Identification	116
Order Conditions	116
Rank Conditions	117
Limited Information Methods of Estimation	120
Full Information Methods of Estimation	122
Comparison of Limited Information and Full Information Estimators of Simultaneous Equation Models	124
Dynamics in Linear Systems of Simultaneous Equations	124
Stability Conditions of Simultaneous Equation Models	127
Final Form of the System	128
Determining Whether a System is Stable or Not	128
Prediction: Chapters 12-16	143
Chapter 12 – Time-Series Regression	143
Features of Time-Series Data	144
Application: Railcars and Power Generation	144
Nonstationarity	146
Modeling Growth Rates – Granger Precedence Tests	148
Model Comparison	150
Forecasting Levels from Growth Rates	151
Chapter 13 – Serial Correlation and Inference	153
Definition of Serially Correlated Errors	154
Robust Standard Errors	155
Serial Correlation Tests	156
Generalized Least Squares	158

Chapter 14 – Highly Correlated Explanatory Variables, Structural Change, and Stability of Structural Coefficients.....	161
Definition, Prevalence and Consequences of Collinearity	162
Formal Definition of Collinearity.....	163
Formal Diagnostics of Collinearity	164
Variance Inflation Factors (VIFs)	165
Variance Decomposition Proportions	166
An Example.....	167
Solution(s) to the Collinearity Problem.....	167
Ridge Regression	168
Ridge Trace of Estimates for California Central Valley Region.....	169
Structural Change, and Stability of Structural Coefficients	170
Definition of Structural Change	170
Gradual or Abrupt Structural Change: The Use of Recursive Coefficients.....	170
Formal Tests of Parameter Instability.....	171
Solutions to Structural Change or Parameter Instability Issue	180
Chapter 15 – Modeling the Variance	182
Overview of ARCH and GARCH Models	183
The ARCH(q) Model.....	184
GARCH Model.....	184
Mechanics of the ARCH Model and the GARCH Model	185
Extensions of the ARCH Model and the GARCH model	186
GARCH in Mean or GARCH-M Model	187
Chapter 16 - Distributed Lag Models – On the Path to Machine Learning.....	190
Overview of Distributed Lag Models	191
Mechanics of the Approaches to Estimating Distributed Lag Models	192
Commentary	206
PowerPoint Presentation	208
