# Causal Inference: Methods and Applications

---

March 2025

## **Causal Inference: Methods and Applications developed for the National Association for Business Economics.**

### **Acknowledgements**

NABE extends a special thank you to the members of Causal Inference Steering Committee whose support and guidance shaped this course.

**Carolyn Evans**, Chief Economist & Principal Engineer (Data Science), Intel Corporation

**Colin Gray**, Senior Data Scientist, Netflix

**Svenja Gudell**, Chief Economist, Indeed

**Mike Luca**, Professor and Director, Technology and Society Initiative, The Johns Hopkins University

**Dimitriy Masterov**, Fractional Economist, frace.io

### **About NABE**

The National Association for Business Economics is the premier professional association for business economists and others who use economics in the workplace. Since 1959, NABE has attracted the most prominent figures in economics, business, and academia to its membership with highly-regarded conferences, educational and career development offerings, industry surveys, and its unrivaled networking opportunities. Past presidents of NABE include former Chairman of the Board of Governors for the Federal Reserve System, Alan Greenspan, several former Federal Reserve Governors, and other senior business leaders.

NABE's mission is to provide leadership in the use and understanding of economics.

## About the Author

Douglas G. Steigerwald is a Professor of Economics, and an affiliated Professor of Statistics, at the University of California, Santa Barbara. His research and teaching focus on frontier econometric methods at the intersection of economics, environmental science, computer science, geography and statistics. His research has been published in leading journals, including *Econometrica* and the *Review of Economics and Statistics*.

At Santa Barbara, Doug heads the Econometrics Research Group, which provides a focal point for graduate students from a range of departments who are conducting applied econometric research. He also has directed the American Economic Association's Summer Training Program, advised the Sloan Foundation on graduate research, and is the faculty representative on the Board of Trustees of the UC Santa Barbara Foundation. Off campus, Doug's activities include serving as a consultant in the finance industry - for Hull Trading and Matlock Capital, in the legal services industry - for LECG, and on fraud detection - for Deckers Outdoors. He has also served as chair of the National Science Foundation's Graduate Research Fellowship Program in Economics.

# Table of Contents

|  |           |
|--|-----------|
| <b>Chapter 1 – Introduction .....</b>            | <b>7</b>  |
| Univariate Time-Series Analysis.....             | 8         |
| Cross-Section Analysis.....                      | 8         |
| Conditional Mean Independence.....               | 9         |
| Conditional Independence.....                    | 9         |
| Potential Outcomes and Causal Effects.....       | 10        |
| Treatment Effect Distributions.....              | 11        |
| Potential Outcomes and Observable Outcomes ..... | 11        |
| Potential Outcomes and Linear Models .....       | 12        |
| Road Map .....                                   | 13        |
| A Brief Introduction to Stata .....              | 13        |
| <b>Chapter 2 – Observational Data.....</b>       | <b>15</b> |
| Modeling Potential Outcomes .....                | 16        |
| Propensity Score Reweighting.....                | 17        |
| Overlap .....                                    | 20        |
| Doubly-Robust Estimation .....                   | 22        |
| Matching.....                                    | 22        |
| Nearest-Neighbor Matching .....                  | 23        |
| Application: Dynamic Pricing .....               | 24        |
| Comparison of Means .....                        | 24        |
| Modeling Potential Outcomes.....                 | 25        |
| Overlap.....                                     | 27        |
| Propensity Score Reweighting .....               | 28        |
| Matching .....                                   | 29        |
| <b>Chapter 3 – Experimental Data.....</b>        | <b>32</b> |
| Question of Interest and Causal Effects.....     | 33        |
| Potential Outcomes.....                          | 33        |
| Treatment Effects .....                          | 34        |
| Treatment Effect Distributions .....             | 35        |
| Target Parameters .....                          | 36        |
| Target Parameter Estimation .....                | 37        |
| Application: Child Learning.....                 | 39        |

|   |           |
|---|-----------|
| Regression Estimation .....                             | 42        |
| Adding Explanatory Variables .....                      | 43        |
| Accounting for Imbalances .....                         | 44        |
| More Precise Estimation .....                           | 44        |
| Differing Treatment Effects .....                       | 45        |
| Multiple Treatments .....                               | 47        |
| <b>Chapter 4 – Randomized Encouragement.....</b>        | <b>49</b> |
| Randomized Encouragement .....                          | 50        |
| Intention to Treat .....                                | 51        |
| Selection into Treatment.....                           | 51        |
| Local Average Treatment Effects.....                    | 52        |
| Application: Management Training.....                   | 52        |
| Comparison of Means .....                               | 53        |
| Two-Stage Least Squares .....                           | 55        |
| Compliers .....   | 57        |
| References .....  | 58        |
| <b>Chapter 5 – Panel Data Methods.....</b>              | <b>59</b> |
| Difference-in-Differences.....                          | 60        |
| Population and Estimands .....                          | 60        |
| Sample and Estimands .....                              | 61        |
| Estimators.....   | 62        |
| Dynamic Treatment Paths .....                           | 64        |
| Pre-Treatment Trends.....                               | 64        |
| Synthetic Controls .....                                | 65        |
| Application: Restaurant Signals of Race and Gender..... | 68        |
| Static Estimate of the ATT.....                         | 69        |
| Dynamic Treatment Effects .....                         | 69        |
| Pre-Period Parallel Trends .....                        | 70        |
| <b>PowerPoint Presentation .....</b>                    | <b>73</b> |
