## Introduction:

This framework developed by the IAHSS Council on Guidelines contains recommendations for how security incident and event categories should be organized within the healthcare delivery system. It is the purpose of this framework to aid the healthcare industry to create a more standardized and consistent approach to the collection and categorization of security incident data within healthcare that will ease comparability from facility to facility.

IAHSS has developed a companion glossary of terms to define and aid the understanding of the phrases and abbreviations commonly used by the healthcare security industry to include those denoted in this framework.

Groupings are defined by:

Violence & Aggression

Other Crimes

Security Assist

Emergency

Safety – Facility Management

## Workplace Violence Typology:

Workplace Violence Type 1: Perpetrator has no association with the workplace or employees

Workplace Violence Type 2: Perpetrator is a customer or patient of the workplace or employees

Workplace Violence Type 3: Perpetrator is a current or former employee of the workplace

Workplace Violence Type 4: Perpetrator has a personal relationship with employees, none with the workplace

| Group                 | Category                                       | Sub-Category   | Incident Type / Person | WPV Sub-Incident Type Sub-Incident Type Victim - Perpetrate |
|-----------------------|--|--|------------------------|---|
