

SMOKE ALARMS

There are two types of smoke alarms:

Battery powered smoke alarms: home owners or a handyman can install battery powered smoke alarms.

Hard wired smoke alarms: a licensed electrician should install hard wired smoke alarms.

Fire Departments recommend the hard wired smoke alarms.

Always read the smoke alarm instructions before installation.

Smoke alarms work best when installed on the ceiling, away from walls.

At least one smoke alarm should be installed on each level of a house or flat.

Fire Departments recommend smoke alarms:

- in the hallways leading from the kitchen to the bedrooms
- in all bedrooms

Read the information and answer the questions.

1. Who can install a battery powered smoke alarm?

2. Who should install a hard wired smoke alarm?

3. What do you need to read before installing a smoke alarm?

4. Where is the best place to install a smoke alarm?

5. Where do Fire Departments say to install the smoke alarms?
