

## Tornadoes

**Tornadoes** are **dangerous** storms. The winds in a tornado are very fast. A tornado can move people and objects high into the air. Tornadoes can **destroy** everything in their path.

Tornadoes can happen when air in a thunderstorm starts to move **counterclockwise**. The direction of the air movement forms a **funnel cloud**.

Tornadoes can happen any time of year. Tornado season is April, May, and June. There are more tornadoes in these months.
