HYDRANT FLUSHING

Spring 2023

During the months of April and May, the Sea Isle City Water Department will be flushing-out the water distribution system through the fire hydrants and exercise water valves throughout town.

Semi-annual hydrant flushing is required to ensure that hydrants and the water distribution systems are functioning properly and can provide the proper drinking water quality (thus providing adequate water flow when needed). This is also a requirement for the Water Quality Accountability Act.

If a hydrant is being flushed near your home or business, we encourage you to avoid using washing machines, dishwashers or other water using devices during flushing operations.

Residents can expect very little disruption in their water service - if any. However, low water pressure and possible water discoloration may occur. In the event of discoloration, simply allow water to run from the tap for a short while until clear. These conditions are not harmful and are usually short term.
