

LEGO SERIOUS PLAY on ZOOM - advice for better sharing of the LEGO model stories

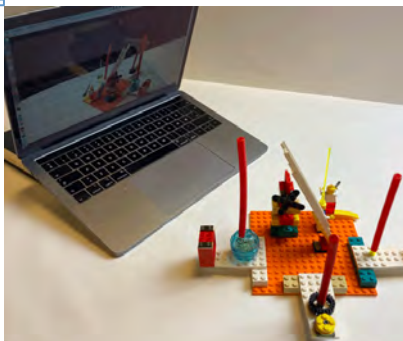

Screen tilted down to focus on model
No distracting face - tilt camera to avoid

Lots of space and flat surface for building with both hands
Tilt the camera so hands are free to point and touch the model

- Use a laptop or desktop rather than a tablet or phone
- Headphones with an in-built microphone will help you communicate more clearly but are not essential
- Use a neutral background and don't use a virtual background
- Tilt your laptop or laptop lid so you can show off and point to your LEGO models
- Use a moveable webcam or your phone as webcam to show the model on a neutral background
- Make sure you are comfortable with how to toggle between multiple cameras
- Make sure you are comfortable with video platform be it zoom, microsoft teams or something else
- Turn on mute until it is your turn to share. The host will spot-light the video on the presenter
- Alternative to 2 cameras on the same device is to login from two diff. devices and use one for face camera and one for showing the model

Tilt your camera. Maybe place the laptop on a book

Download an app and use your iphone as an external camera. Both wi-fi and usb

You can also use a standard USB webcam for sharing the image of your model

Login from two different devices and use 1 camera for face and 1 camera for showing the LEGO model
