

MONTHLY
GRAIN REPORT

April 2, 2025

VOL. 3, NO. 3

Wyatt Fellows, MMA Analyst

REVIEW

Corn, Soybeans, and Wheat all experienced sharp declines into March 4 before finding support and rebounding. Coincidentally (or not!), this was just 2 trading days past Venus stationing retrograde. Since these bottoms, grains have been mostly range-bound, with Soybeans demonstrating relative strength. This wasn't unexpected; however, as last month it was stated, *"With all three grains in different stages of their respective primary cycles, the complex could become disjointed and choppy over the next few months. This ties right in with Venus starting her retrograde motion on March 1 and remaining that way until April 12."* Wheat has gone on to make a marginal new low, but Corn looks to have just done a successful re-test, and Soybeans have remained comfortably above off of the lows put in on March 4.

News and Highlights

The highly anticipated prospective plantings report was released by the USDA on Monday, March 31. According to the report, Farmers in the US intend to seed 95.3 million acres of Corn this spring. This would be a 12-year high and 5.2% above last year's planted acres. Much of this increase in expected Corn acres came at the expense of Soybeans, which farmers intend to plant 83.5 million acres. This is a five-year low and down 4.1% from last year's planted acreage. Wheat acres were also projected lower than trade estimates, coming in at over 1 million acres less than expectations.

Grain markets held up reasonably well after the release of the report, reflecting the trade was not surprised by any of the numbers. Focus will now shift toward planting weather as we move through April. The market's job now is to ensure those intended acres get planted. Corn typically has a tighter window in which to plant for maximum yield potential. As you move outside that window, Soybeans become a more viable option as the yield penalty of later planting is much lower. If planting delays start to manifest towards the end of April, we may see some aggressive bidding come into the grain markets, especially for Corn.

By next month's report, we should have a good handle on whether or not spring weather is going to have an effect on grain markets. This will set the table for the summer growing season, which may be challenging due to the Saturn/Neptune conjunction taking place this year and next (Saturn and Neptune come within less than a degree of exactness this year before forming an exact conjunction in February 2026). My studies have shown this aspect (along with the opposition) has corresponded to extreme droughts over Wheat producing regions of the world. This, in turn, leads to bull markets in Wheat (and other grain markets) that can run for even a few years. I will elaborate more on this in next month's report.

CORN

Long And Intermediate Cycles Outlook

After peaking back in 2022, Corn was immersed in a 2+ year bear market that looks to have culminated in August 2024. August was at least a 33-month low, but it also is likely a 4.6-year low as well. It could even be a 9-year low if we consider the correct start of this current 18-year cycle to be in 2016 and not 2020. Either way, Corn should be bullish, and it has been, by breaking out of a long-term falling wedge pattern visible on the weekly chart. Even the long-term moving averages (70-, 40-, 23-week) are confirming the bullish trend, with the faster averages crossing above the slower.

April begins the 8th month of this new 33-month cycle. After an impressive rally into February of this year, Corn has now corrected and is perched just above all three long-term moving averages. It would be ideal if prices remained above these moving averages on a weekly closing basis, but even one weekly close below would be ok as long as prices quickly regained these levels the following week. The lowest moving average comes in around 430.00 this month. Right now, I am expecting Corn to remain supported into at least the June-August time period, which will coincide with the heart of the growing season in the US I am also expecting this initial rally to make it to at least 540.00 +/- 20.00 in the nearby contract. I think there is a very good chance we can reach this zone sometime this summer.

Primary Cycle Outlook And Price Projections

Preferred Labeling: March 31 will begin the 18th week of the 15-25 week primary cycle measured from the 432.75 low of November 26 in the May contract. Corn is now in the time band for when a primary cycle low is due anytime in the next 8 weeks. There is even a chance it occurred last week when Corn traded down to 442.00 on March 28. This would have been into the 17th, which would have been on time.

The price target for a bullish primary cycle low would have been 475.75 +/- 10.00 in the May contract. Corn has fallen below this zone but is holding critical support at 450.00 on a daily closing basis. If the primary cycle didn't bottom on March 28 and Corn starts closing below 450.00, the next support zone for a low is 434.00 +/- 5.00. This would be back to an open chart gap on the continuous corn chart at 431.50-435.75 and just above the long-term moving average support mentioned above. I am focused on the last 2 weeks of April for a primary cycle low if Corn falls below 442.00.

If the primary cycle low did come in on March 28, then an initial upside price target would be 480.25 +/- 9.00 in the May issue. We would expect Corn to make at least back the 50-day moving which is around 480.00 this week but falling about .05 a day. More bullish targets would be above the previous primary cycle crest of 518.75, and come in at 528.50 +/- 10.00. Hitting this target would satisfy a minimum upside objective for this 33-month cycle.

Alternate Labeling: It's possible a primary cycle low occurred on March 3 when the front-month Corn contract traded down to 439.00 (or 426.50, depending on rollover parameters). This would have been either into the 14th week or 27th week, depending on the correct starting point of the previous primary cycle. This implies it would have been a little shorter or a little longer than a normal length cycle. What I like about this scenario is March 3 was the first trading day past Venus (grains) turning retrograde, giving a geocosmic reason for a low to form. The decline lasted 2 weeks, with the CCI reaching an oversold reading below -200, giving a technical reason for a low to form. This possibility was laid out nicely in last month's report when I stated, *"We like to see declines of 2-5 weeks into primary cycle lows, so if last week was the crest, Corn could fall very sharply these next two weeks into a low during the 27th week (it is indeed starting to fall sharply this week). This would still be ok, and coincidentally, it would align with the time period surrounding Venus stationing retrograde on March 1."*

In this labeling, March 31 will begin the 4th week of a new primary cycle. Last week's low of 442.00 on March 28 could be considered a successful re-test, with Corn readying for more upside, possibly above 500.00 over the next few months.

Geocosmics

Upcoming geocosmic signatures that might be influential to the Corn market +/-4 trading days:

Mercury Direct April 7 (allow a week on either side)

Venus Conjunct Saturn April 7

Ceres Square Jupiter April 10

Venus Direct April 12

Sun Square Pluto April 23

Venus Conjunct Saturn April 24

Mars Opposite Pluto April 26 (watch for potential crop damage)

Short-term Solar-Lunar reversal dates for the Corn market: These dates can correlate to isolated highs and lows from which the market can experience a reversal of 3% (better if 6%) +/- 1 trading day. They are especially effective when they happen to coincide in the time band for one of the geocosmic signatures listed above. The more * next to the date indicates the higher potential for a reversal.

April 7-8 **

April 16-18 *** (highs)

April 28 ** (lows)

Summary

Corn has a few different possibilities at the primary cycle level. All have the chance to be correct at this point, with the common thread being that a primary cycle low has formed or will form shortly. 450.00 is holding as important support, with the next important level coming in at 434.00 +/- 5.00. The timing is setting up nicely for Corn to rally on any significant weather events that might pop up as early as this month or during the growing season.

Trading Strategies

Position Traders: Were flat and advised, "Go long at 460.00 +/- 15.00." Got it. Exit 1/3 at 490.00 +/- 10.00 and set the stop loss on a weekly close below 400.00 or 420.00 depending on your risk tolerance.

Aggressive Traders: Were flat and advised, "Go long at 475.00 +/- 10.00." Got it. Exit 1/3 at 500.00 +/- 10.00 and set the stop loss on a weekly close below 420.00

Producers: Buy December 500.00 calls for 15.00 or less. We will make cash sales against these calls if a summer rally develops.

*If you are uncomfortable trading futures and options, exposure to Corn can be obtained through the CORN ETF.

WHEAT

Long And Intermediate Cycles Outlook

April will begin the 8th month of a new 36-month cycle in Wheat measured off the August 2024 low. I had been open to the idea that Wheat might make one more push lower below 493.50 (it still might as the front-month futures continue to make new contract lows), but with technical evidence starting to mount that a good low is in place, this will be the preferred scenario until proven otherwise.

As stated last month, "The 18-month moving average (represented by the blue line on the weekly continuous chart) comes in around 575.00 this month. Wheat is currently above it, so if it can hold this level until the end of the month, we will have our early indication that August 2024 was a longer-term low. Probably a 9-year low as well." It didn't hold, so Wheat is still at risk of falling below the August 2024 low.

It should be pointed out that if Wheat didn't bottom in August of last year, April will begin the 31st month of an older 36-month cycle, and also, the 13th month of the final 12-month cycle before this 36-month cycle is due to bottom. This implies we are now in the time band for when both of these cycles are due. Normal 12-month cycles last 9-15 months, so a low is due by June of this year. Coincidentally,

this is when the final Jupiter/Saturn waxing square is taking place. This aspect has an 80% correlation to a 12-month or greater cycle in Wheat within 2 weeks.

However, we might not have to wait until June to see a low. April has a potent mix of geocosmics that pertain to Wheat. Venus will conjoin Saturn twice this month along with stationing back direct. Mars also gets involved by forming an opposition to Pluto towards the end of the month. Any of these signatures could correspond to a low in Wheat, but perhaps the biggest one is the last pass of Jupiter forming a sesquiquadrate to Pluto on April 17. Surprisingly, this aspect has a 100% correlation to primary or greater cycles in Wheat when given an orb of 4 weeks.

Primary Cycle Outlook And Price Projections

March 31 will begin the 12th week of the 15-25 week primary cycle measured off the January 10 low of 537.75 in the May contract. This primary cycle has turned bearish by taking out the low that started the cycle. This implies lower prices are still ahead until this cycle bottoms in 4-14 weeks unless it contracts. This is a legitimate possibility if a longer-term cycle low is still ahead.

The downside price target for a primary cycle low is 508.75 +/- 13.50 in the May contract and 517.75 +/- 10.75 in the continuous front-month futures contract. Wheat reached both of these targets on March 28 when it fell to 517.50, so that could have been it. The close on that day held both trendline and horizontal chart support, which was positive, along with a case of bullish technical divergence between the price and both the CCI and stochastics. The only issue here is that it would have occurred in the 11th week of the cycle, which would have been contracted by a few weeks. A rally back above the 52-day moving average would signal that a new primary cycle has stated.

If Wheat continues lower, the next price targets for a low are 483.50 +/- 16.00 in May and 496.25 +/- 13.50 on the continuous contract. Should Wheat reach these levels, it could be just a re-test of the August 2024 low or a slightly lower low that puts in the final 36-month and likely 9-year bottom. Either way, a healthy rally could commence from these levels, possibly being triggered by the coming Saturn/Neptune conjunction.

Geocosmics

Upcoming geocosmic signatures that might be influential to the Wheat market +/-4 trading days:

Mercury Direct April 7 (allow a week on either side)

Venus Conjunct Saturn April 7

Ceres Square Jupiter April 10

Venus Direct April 12

Jupiter Sesquiquadrate Pluto April 17 (allow 4 weeks on either side)

Sun Square Pluto April 23

Venus Conjunct Saturn April 24

Mars Opposite Pluto April 26 (watch for potential crop damage...late spring freeze?)

Short-term Solar-Lunar reversal dates for the Wheat market: These dates can correlate to isolated highs and lows from which the market can experience a reversal of 3% (better if 7%) +/- 1 trading day. They are especially effective when they coincide in the time band for one of the geocosmic signatures listed above. The more * next to the date indicates the higher potential for a reversal.

April 9-10 *

April 21 * (highs)

April 23-24 * (lows)

April 28 *** (lows)

Summary

Wheat is immersed in a bearish primary cycle. There is a chance we saw the primary cycle low in the 11th week on March 28, but more favorable geocosmics are aligned for a low in April. Depending on how far Wheat falls in this primary cycle, it will likely solidify whether or not August 2024 was a long-term low or if it is happening now. In either case, the odds of a significant rally are building.

Trading Strategies

Position Traders: were put long last month but would have been stopped out last week. Try the long side again at 500.00 +/- 15.00. If filled, set the stop loss on a weekly close below 450.00 for now.

Aggressive Traders: were long but would have been stopped out on last week's close. Try the long side again at 510.00 +/- 10.00. If filled, set the stop-loss on a weekly close below 450.00 for now.

Producers: were advised last month, *"Look to buy July or August 2025 out-of-the-money calls if July Wheat drops back to 570.00 +/- 10.00 or lower."* Producers should now have some upside calls on to make cash sales against.

*If you are uncomfortable trading futures and options, exposure to Wheat can be obtained through the WEAT ETF.

SOYBEANS

Long And Intermediate Cycles Outlook

Like the other grains, Soybeans also look to have bottomed on a longer-term basis in August 2024. While the price action hasn't been as robust as the Corn market, price has been in a nice steady uptrend since that bottom. Soybeans even put in a "double-bottom" re-test of the August low in December ("DB" on the weekly chart). Since that December low, Soybeans have had numerous weekly closes above the 36-week moving average, with the faster 18-week moving average crossing above this average as well. This supports the fact that the longer-term trend is indeed turning higher.

April will begin the 8th month of a new 34-month cycle. Last month stated, *"The next technical step is to take out the down-sloping black trendline and rally above the 72-week moving average."* Soybeans keep bumping at the underside of this trend line but have yet to break through. If and when it happens, we could see a quick rise to the 72-week moving average. That moving average will be right around 1100.00 this month. I would expect this level to provide some strong initial resistance.

The average time it takes 34-month cycles to top out is 17 months (normal range 7-32 months), with an average gain of 80% (range 6%-228%). It was stated last month, *"The concern here is that Soybeans will get caught up in another tariff war under the Trump administration. So far, this hasn't transpired, but should it become a reality, it has the potential to disrupt the duration of the rally and/or the full upside potential of this new cycle."* Well, China has now applied retaliatory tariffs on imports of US Soybeans. So far, the market has taken this bearish fundamental in stride and is holding up quite well. The hope is that this tariff nonsense is temporary and my very conservative price target of 1200.00 can still be reached.

Primary Cycle Outlook And Price Projections

The week of March 31 will begin the 15th week of the 15-21 week primary cycle measured off of the 955.50 low on December 19 in the May contract. Soybeans have now entered the time band for when a primary cycle low is due to bottom in 1-7 weeks. The main question is whether or not the primary cycle crest occurred on February 5 when Soybeans hit a high of 1092.50. I think it did, and this current rally will top out below there before heading down to a primary cycle low.

Primary cycles in Soybeans break down into either three phases of 5-8 week major cycles or two phases of 8-11 week half-primary cycles. My bias is this primary cycle is breaking down in a two phased pattern. February 5 was the first half-primary cycle crest (probably the primary cycle crest as well),

followed by a half-primary cycle low occurring on March 4 (two trading days from Venus turning retrograde). Therefore, March 31 will begin the 4th week of the second half-primary cycle. It is due to bottom in 5-9 weeks unless it is going to contract by a week or two.

The price target for the crest of this second half-primary cycle (and also primary cycle) is still 1128.00 +/- 16.00 in the bullish case. If the primary cycle crest is already in with the 1092.50 high on February 5 (my bias), then the rally to this second half-primary cycle crest will be corrective, with a price target of 1041.75 +/- 12.00. Soybeans have entered into this price zone as of April 1, so a crest could transpire at any moment to be followed by a 2-5 week decline. If Soybeans are going to continue to rally into Venus stationing direct on April 12 before toping out, then a more bullish price target of 1070.00 is possible.

Geocosmics

Upcoming geocosmic signatures that might be influential to the Soybean market +/-4 trading days:

Mercury Direct April 7 (allow a week on either side)

Venus Conjunct Saturn April 7

Ceres Square Jupiter April 10

Venus Direct April 12

Venus Sextile Uranus April 20

Venus Conjunct Saturn April 24

Short-term Solar-Lunar reversal dates for the Soybean market: These dates can correlate to isolated highs and lows from which the market can experience a reversal of 3% (better if 6%) +/- 1td. They are especially effective when they coincide in the time band for one of the geocosmic signatures listed above. The more * next to the date indicates the higher potential for a reversal.

April 7-8 *** (lows)

April 14-15 *** (highs and lows)

April 25-28 ** (highs and lows)

April 30 **

Below is the Venus chart for Soybeans derived from Timing Solutions. It shows what the price of Soybeans typically does as Venus moves through the Zodiac. Using this chart may be challenging this year due to Venus being in retrograde motion from March 1 to April 12. This will cause Venus to spend more time in the signs of Pisces and Aries early in 2025. I think once we get past April, this chart could depict a nice path for Soybeans for the rest of the year.

Summary

Soybeans are getting later in their primary cycle and have now entered the time band for when this low is due (ideally late April into May). Currently they are rallying to an expected half-primary cycle crest due to culminate at any time (perhaps around April 12), with a price target of 1041.75 +/- 12.00. They could even reach 1070.00 before topping out. On the decline to a primary cycle low there should be strong support at 1000.00 +/- 10.00 and then 950.00 +/- 10.00.

Trading Strategies

Position Traders: are long 2/3 after getting the first 1/3 off for nice initial profits. Exit 1/3 at 1045.00 +/- 7.00 and all at 1070.00 +/- 10.00. Move the stop loss up to a close below 990.00.

Aggressive Traders: Traders were long 1/3 and advised, *"Traders may buy those covered positions back now or on a drop below 1030.00, depending on your risk tolerance."* That happened, so we are fully long again. Exit 1/3 at 1040.00 +/- 5.00, 1/3 at 1055.00 +/- 7.00, and all at 1070.00 +/- 10.00. Traders may also go short at 1070.00 +/- 10.00. Move the stop loss on all longs up to a close below 990.00. If put short, set the stop loss on a weekly close above 1110.00 for now.

Producers: We will be looking to add some July or November calls at the next primary cycle low.

*If you are uncomfortable trading futures and options, exposure to Soybeans can be obtained through the SOYB ETF.

*The April MMA Monthly Grains Report will be released during the week of April 28, 2025.

ANNOUNCEMENTS:

NOTE 1: "WHAT THE &%#@?! IS HAPPENING? PART 2: An Astrological Interpretation of the Planetary Movements Now Underway" will take place on SUNDAY, APRIL 6, 2025, at 1:00 PM EDT. On January 25, MMA conducted a snap mini-webinar by Ray Merriman describing the geocosmic conditions unfolding at the time that correlated with the acceleration of confusion and uncertainty in the political and financial worlds. All the personal planets were in the beginning stages of what Ray called "retrograde chaos." Those back-to-back retrograde cycles would continue into mid-April. That period of retrograde chaos was an eerily accurate vision of what life would be like in the first 3-4 months of 2025. Now, the retrograde chaos interval is coming to an end, and we enter into stage 2 of a different type of turbulence when *all* the outer planets move into new signs between March 30 and July 7. This is the first time such a cosmic phenomenon has happened in 300 years — and before that, it occurred another 300 years ago.

What do these rare cosmic periods imply for individuals, world leaders, and the world at large? And what do they portend for certain financial markets? For instance, Gold and Silver made important lows just as Venus turned retrograde on March 2. Now, Gold is making new all-time highs, and Silver is making new yearly highs as Venus prepares to end its retrograde cycle in the next two weeks.

This 60- to 90-minute-long webinar will look at the charts of Gold, Silver, and the U.S. stock market. It will also examine the horoscope of President Donald Trump. Understanding these cosmic challenges can make the difference between stress or excitement about new opportunities looming ahead. Join Ray Merriman for an insightful look at these times. The cost is \$35. To register, [click here](#).

NOTE 2: The MMA Grain Cycles Report will be released this week. Written by top MMA Grains Analyst Wyatt Fellows, this monthly report is a must for those who trade or farm Soybeans, Corn, and/or Wheat,

as Wyatt himself does. These reports are especially valuable now because of the approaching 36-year synodic (conjunction) cycle of Saturn and Neptune, which has shown a strong historical correlation to long-term cycles in all grain markets. This is considered a drought cycle. To subscribe to this excellent monthly report, [click here](#).

NOTE 3: THE MARCH ISSUE OF THE [MMA Monthly Cycles Report Plus+](#), edited by Pouyan Zolfagharnia, will also be released this week. This market letter has become a very popular addition to the MMA Cycles Report (it's less technical, more visual, and contains horoscopes of current importance, high-quality analysis, and updates on MMA Cycles Report markets). The mid-month addendum to the MMA Cycles Report covers Pouyan's outlook on Gold, Silver, NASDAQ, and Crude Oil. It has stunning graphics and charts (people love it!) and is very readable. It contains more illustrations and references to geocosmics than most MMA Cycles reports and is only available for subscription to those who also subscribe to the MMA Monthly Cycles Report. If you wish to try this month's addendum, along with the latest issue of the MMA Monthly Cycles Report, sign up online at the link above. Subscription for a monthly copy of both reports is \$55. That will give you both the most recent March copy of the MMA Cycles Report and the monthly MMA Cycles Report Plus+ addendum coming out this week. For further information and ordering instructions, please [click here](#).

NOTE 4: GET READY FOR MMTA4 REGISTRATION, WHICH STARTS APRIL 15!!! This is our highly regarded two-year educational and training experience — one that will change your life and the way you view financial markets. Yes, the course is challenging, but it is also incredibly exciting! With this course, you will learn how to identify where the market is at any given point in time — and which trading or investing strategy to employ.

The eight-course program includes six or seven Zoom meetings per course (over 100 hours of live instruction and interaction) with instructor Wiebke Held and MMA analysts such as Pouyan Zolfagharnia, Gianni Di Poce, Ulric Aspghren, Kat Powell, Wyatt Fellows, and, of course, Raymond Merriman.

The classes will meet on Saturdays, 25 times per year, at noon EST, beginning September 13. There are one-month breaks between each course and a two- to three-month summer break. The program also includes at least one live, in-person (or optional online) weekend session, plus a voluntary review session after each course, held prior to the exam. There is nothing else as comprehensive in the field of market timing as the MMTA program! It covers MMA's market timing methodology for long- and intermediate-term investing as well as position and aggressive short-term trading.

Acceptance into MMTA requires an interview prior to enrollment. If you are interested in exploring whether MMTA is right for you, let us know, and we will schedule a time to talk.

Here are just a few of the many very positive reviews from graduates of the last MMTA3 program (2023-2024):

I wanted to express my deepest gratitude for generously sharing your knowledge and teaching. As you know, I am fairly new to trading and joined MMTA3 to learn a system for approaching the stock market. At the start of the year, I set a personal goal to double the money in my trading account — something I thought was impossible at the time. Thanks to the knowledge and tools taught in MMTA3, I was actually able to accomplish this goal! In fact, I even exceeded it. — W.H., Germany

Thank you, Ray and Gianni, for the fantastic course material and support. That is why I have made money — and every dollar spent on the courses has been paid back, and then some! — J.L., Netherlands.

This course was truly mind-blowing! I learned so much. Thank you all for sharing such excellent trading data and knowledge. This course is worth more than a college degree — at a fraction of the price, too. — K.L., Australia

NOTE 5: The NEW monthly MMA Technology Cycles Report by Wiebke Held was issued last week, on March 30. Wiebke's excellent two-year research papers were based on extensive studies of long-, intermediate-, and short-term cycles in the NASDAQ spot index (not futures). This report differs in style and substance from the other MMA monthly reports (it is more condensed and less technical). It provides an outlook not only for the NASDAQ but also for the QQQ (ETF) and specific technology stocks such as Microsoft, Google, NVIDIA, Tesla, and Apple. It will also include unique CRDs (critical reversal dates) specific to the NASDAQ, based on Held's meticulous research. To receive the current issue of this new report, sign up now for only \$35! Or save by ordering the three-report or twelve-report subscription by [clicking here](#).

NOTE 6: THE "[JUPITER REPORT](#)" — YOUR MOMENTS OF OPPORTUNITY — IS NOW AVAILABLE. This newest product, written by Raymond Merriman, is a 30- to 40-page report that all traders (and even non-traders) will find highly valuable. It identifies the times during the year when Jupiter transits are highlighted in your natal chart. It delineates the meaning of Jupiter's transits to your natal planets and angles over a 14-month period (including one month before your order and one month after the year ends). *As an added bonus, each transit is ranked on a scale from -3 to +3 in terms of favorability for trading. Traders may find this especially valuable!* Would you like to know when you are under a +3 transit and, therefore, most likely to experience trading successes? Or a -3 transit with stronger-than-usual potential for misjudgments and losses? You betcha! The cost for your 14-month Jupiter Report is \$69. [Click here](#) to order!!!

NOTE 7: THE MMA Solar-Lunar App now offers reversal signals on the NASDAQ to all subscribers! The app now provides daily weighted values for four markets: the DJIA, NASDAQ, Gold, and Silver.

This app is an ideal tool to have in your back pocket if you are a short-term swing trader looking for high-probability dates that identify isolated lows and highs in the DJIA, NASDAQ, Gold, and Silver markets. It is available only on Apple products (iPhone and iPad) at this time, although we are getting close to developing it for Android phones as well, possibly by the end of this year.

To learn more about the MMA App, [click here](#). To order it, go to the Apple App Store and search for *Merriman Solar/Lunar Reversals*.

NOTE 8: The MMA Weekly [YouTube show](#), "Geocosmic Week in Review and Look Ahead," with Gianni Di Poce, is conducted on Wednesday evenings! Each 5- to 20-minute **FREE** episode reviews the previous week's market activity and offers a preview of the geocosmic signatures in effect for the coming week and beyond.

NOTE 9: MMA's Free Weekly Column Podcast Is Available on SPOTIFY, APPLE, and AMAZON! Now, you can listen to a podcast of this weekly column, narrated by Thomas Miller, each Saturday! Thomas has an excellent voice and brings the weekly column to life in a personable and, at times, humorous fashion. Just follow Merriman Market Analyst on Spotify or Apple to listen to all our episodes. A new podcast episode

will be released every weekend. This is a FREE service and is available to everyone. Check out our podcasts on [Apple](#), [Spotify](#), and [Amazon Music](#). It makes for great listening!

EVENTS:

April 6: WHAT THE &%#@?! IS HAPPENING? PART 2: An Astrological Interpretation of the Planetary Movements Now Underway, a 60- to 90-minute-long special webinar on SUNDAY, APRIL 6, 2025, at 1:00 PM EDT. The cost is \$35. To register, [click here](#).

April 15, 2025: Registration opens for MMTA4, our two-year training program beginning September 13, 2025. The first course, Cycles — Market Cycles, will run for eight weeks and cover the most important principles that traders and investors need to know when identifying the optimal time bands for cycle highs and lows in most financial markets. This material forms the foundation of all MMA's trading and investment strategies. There is no astrology in Course 1; that occurs in Course 2. The coordinator for MMTA4 will be Wiebke Held, and we will soon announce our impressive faculty lineup. Stay tuned!

Disclaimer and using this information properly: Futures and options trading involve the risk of large losses as well as large gains.

Information is provided herein with sincere intent and according to MMA's original research studies and methodologies. These reports are provided mainly for "speculators." By its very nature, "speculation" means "willing to take risk of loss." "Speculators" must be willing to accept the fact that they are going to have losing trades, many more than, say, "investors." That is why they are "speculators." The way "speculators" become profitable is not so much by a high percentage of winning trades but by controlling the amount of loss on any given trade, so the average trade on winners is considerably more than the average trade on losing trades.

MMA's comments, strategies, and data are given to serve as guidelines for traders for each day and/or week. Comments and strategies are based upon intraday and intraweek highs, lows, and closes at the end of the day or week. Traders are advised to use these only as guidelines - and use intraday analysis to establish positions in directions of comments given, so long as those support/resistance (entrance) areas) look favorable according to intraday analysis as well. Support and resistance are areas for day traders to look to buy and sell intraday. No guarantees are made for accuracy.

Support may represent favorable risk/reward places to buy if the trend is up. If prices trade below support, then have a close back above; it is considered a bullish "trigger" and oftentimes represents a good buy signal. Resistance may represent favorable risk/reward places to go short if the trend is down. If prices trade above it, then have a weekly close back below; it is considered a bearish "trigger" and oftentimes is a good sell signal.
