

WEEKLY
CRYPTO REPORT

**MMA WEEKLY CRYPTO REPORT
FOR THE WEEK OF MARCH 31, 2025**

GEOCOSMIC CRITICAL REVERSAL DATES (CRDs)

These dates affect all markets. They are the midpoints of geocosmic clusters and have a normal orb of three days on either side (82% rate of frequency). Sometimes, they expand to as much as six days (90+% frequency with that orb). The idea is to see a new two-week or greater high or low and then a reversal. It is especially effective when major, half-primary, or primary cycle troughs are due. These are more important than the solar-lunar reversal dates. The more stars, the greater the historical correlation with a cycle culmination. Please read Volume 3 of the Stock Market Timing series for more information. Below is the midpoint date and in parentheses, the length of time containing the geocosmic signatures (known as a "cluster"). If the cluster is long (more than 15 days), there may be other possible reversals based on tighter geocosmic clusters within the greater cluster.

Mar 25-28* (this week)

Apr 6* (could even be close to April 10, which is midpoint between Mercury direct April 7 and Venus turning direct April 13)

Apr 18-21* (allow one week)**

These periods are usually more important than the solar/lunar reversal zones and are usually more accurate because they have a wider orb of time (+/- 3 trading days vs. +/- 1 trading day for solar/lunars). They will correspond more often with major, half-primary, or full primary cycles, whereas lunar reversals need only correspond to 2.5% reversals in stocks.

ABBREVIATIONS:

CRD = Geocosmic Critical Reversal Date

ATH = All-Time High

MA = Moving Average

PB = Primary cycle bottom

PT = Primary cycle top

MB = Major cycle bottom

MT = Major cycle top

TB = Trading cycle bottom

TT = Trading cycle top

BTC nearby futures – (Bitcoin/USD) by Gianni Di Poce, MMA Analyst, and Ray Merriman: The weekly close was a bearish trigger. The close was below the TIP for the 8th consecutive week, which means it remains in a trend run down.

This week's TIP is 84,067. It will be upgraded to neutral if it closes above there this week.

Weekly support is **81,512-82,275**.
Weekly resistance is 86,577-87,340.

Bullish crossover zones are in effect at **81,146-85,287 (it closed here)**, 52,243-55,995, 44,280-44,687, 40,210-42,442, 31,051-31,267, 27,625-28,025, 21,477-24,580, 17,145-18,030, 11,624-12,042, 10,850-10,885, 9932-10,770, 9304-9395 and 4280-4352.

BTC closed above bearish crossover zones that had formed previously at 28,125-28,700, 24,140-27,838, 21,417-21,505, 19,195-20,470, 7710-8442, and 4819-4841, so these are support zones.

Preferred Primary Cycle Labeling: The week of March 31 starts the 34th week in the primary cycle measured from the August 5 low at 49,365. The January 20 high at 110,150 was the cycle crest, and we could be in the 10th week of the correction from this peak. As explained last week and still the case, *"Corrections into a primary cycle trough typically last 3-8 weeks in Bitcoin, but since a drop into a greater 15-month cycle low is taking place, it could last a little longer. But at this point, the longer it takes to make a new low, the greater the odds become that the March 11 low was a primary cycle low. The good news is that this cycle has still spent more time going up than down, so it's exhibited a "bullish right translation" (it peaked in the 24th week)."* No change as we head into the second quarter.

Primary cycles in Bitcoin last 25-41 weeks, so we are in the time band for a bottom at any time, and within the next 7 weeks if it didn't bottom already. Remember that Bitcoin is in the 3rd year of its 4-year cycle, so we must stay vigilant for a 4-year crest forming sometime this year or maybe even early next year. If it already peaked on January 20, then Bitcoin could drop into 2026. We're now in the 11th week of the third and final major cycle phase, if March 11 wasn't the low, which means in the time band for a major cycle trough since the primary cycle breaks down into 9-14 week major cycles or 13-20 week half-primary cycles.

The Alternate Primary Cycle Labeling: There is none anymore. The only issue is when the third 9-14 week major cycle will form, anytime in the next 3 weeks, and if it will be normal or distort.

Bottom line: Bitcoin was slammed lower on Friday after spending most of last week near the highs. This is a concern near-term, but as long as the key support zone at 84,000-85,000 holds on a closing basis, it would mean the bulls have ground to stand on near-term. Still, the rejection at the important zone of 88,000-90,000 warns that not enough buyers are in this market yet.

In time, it could still rally as high as 150,000 or more sometime this year once the primary cycle bottoms, but a high of significance could still be approaching as we go deeper into the 3rd year of the 4-year cycle. It's still our bias that a 16-month low is unfolding, and we've already declined 30%. But it could still drop as much as 50% before it's all said and done.

Geocosmics: We're still in the March 25-28 CRD, and we have a potential high on March 24, which looks to have been the reversal associated with this time band. It stated, *"This week, we have a slew of Venus signatures, which may be very important for Bitcoin as this planet has been demonstrated to hold great sway over this market. Venus will retrograde back into Pisces on March 27 and form a conjunction with Neptune on the same day. Then, over the weekend, Neptune will make the initial ingress into Aries on March 30."*

The CRD spills over into Wednesday this week. We also have Mars trine Saturn on April 4. However, the main focus in the next couple of weeks is Mercury and Venus changing directions, on April 7 and 12, respectively. This could line up with a cycle bottom if it's not complete already. It makes up part of the April 6 CRD.

Technical: Last week's concerns with Bitcoin were confirmed on Friday especially after prices were slammed lower. It stated, *"...prices failed to reclaim the former-support-turned-resistance zone at 88,000-90,000. A clearance of this technical level would serve as a strong signal that the corrective bear market in Bitcoin is complete. In the meantime, we must leave the door open for a final drop as low as 70,000-72,000."* No change here.

The March 11 occurred with a case of bullish divergence in price from the RSI indicator, which implied downside momentum had waned. There's even some support in the 75,000-80,000 zone. It's still our bias that a rally as high as 150,000 can't be ruled out once this market bottoms.

LUNAR REVERSAL SIGNALS (FOR CASH): These values pertain to the Moon's position at noon GMT instead of noon NYC since GMT is the change of date associated with Bitcoin.

The following table shows two sets of weighted values. The left-hand set is of 12% or greater reversals based on lunar days from our studies, now going back to July 17, 2014. The right-hand set includes 10% or greater reversal values of Moon signs only since Uranus has been in Taurus. These numbers represent the potential for reversal, where anything above 120 has a high probability of an isolated top or bottom to trade opposite of, for a 12% reversal. We may have to adjust this first column down to 115 now that we have added another 4 years of data. * represents a strong reversal possibility. The more * the stronger it is (however, the right-hand column can only hold one * for now). # represents a low likelihood of a reversal. The more #, the less likely a reversal or big range day. The best setup is when both sets of numbers for each sign agree with a reversal, low, or high. Keep in mind that these are purely lunar days, not solar/lunar days, as with metals and stocks. Please note that our studies are based on noon GMT and not Eastern time since Bitcoin's day is based on GMT, not Eastern Time, and noon is the middle of the

trading day. However, since the high or low of the day may happen before or after noon, and the Moon can move up to 7 degrees in half of a day, we have to allow a one-day orb for these dates to manifest a correct setup.

The lunar cycles for Bitcoin for the next few days are as follows:

Total cases since July 17, 2014

Total cases with Uranus in Taurus

	<u>Reversal 12%</u>	<u>Lows</u>	<u>Highs</u>	<u>Reversals 10%</u>	<u>Lows</u>	<u>Highs</u>
Mar 25-26	97.7	122.6*	72.6#	134.1*	157.3**	111.0
Mar 27-28	73.8#	73.6#	74.1#	56.5##	37.7###	75.2#
Mar 29-30	96.7	71.4#	122.2*	90.5	54.4##	126.7*
Mar 31-Apr 1	115.8*	86.5	145.2**	98.0	89.1	108.9

Apr 29-30	99.4	77.8#	121.0*	112.2	94.9	129.5*
May 1-3	112.4	140.0**	84.6	101.4	132.2*	70.5#
May 3-4	115.9*	126.0*	88.0	120.8	125.4	116.4*

Strategy: Position traders are long with a stop loss on a close below 72,000 if offered. Cover 1/3 on a rally to 91,000 +/- 1000 if offered.

Aggressive traders are long with a stop loss on a daily close below 79,395.

Very Aggressive Traders are long with a stop loss on a daily close below 79,395.

ETH (Nearby Ethereum) by Gianni Di Poce, MMA Analyst: Last week's close was mixed. The close was below the weekly TIP for the 8th consecutive week, which means it remains in a trend run down.

This week's TIP is 1958. It will be upgraded back to neutral if it closes above there this week.

Weekly support is 1761.50-1796.50. A weekly close below this range will be bearish. A trade below followed by a close back above is a bullish trigger.

Weekly resistance is 2000-2035. A weekly close above this range is bullish. A trade above followed by a close back below is a bearish trigger.

Bullish crossover zones are in effect at **1527-1622.50**, 1296-1331, 1219.50-1225, and 787-902. It closed below others at 1891.50-1963 and 2134.50-2214.50, so this is now resistance.

A bearish crossover zone is in effect at 2914.50-3206. It closed below one at **1608-1616.50**, so this is support.

Preferred Labeling: This week begins the 30th week in the primary cycle measured from the September 6 low at 2170 in Ethereum. Ethereum's low from March 11 at 1755.50 is holding so far, but with Friday's sharp selloff, it looks like it may be threatened to the downside. That said, April will start the 18th month from October 2023, and Ethereum is due for a 14-month low at any time. It's getting to be late in this intermediate-term cycle. But Bitcoin still has not taken out its low from August 2024, while Ethereum has taken out its September 2024 low, so intermarket bullish divergence is in effect. There's a lot of negative sentiment in Ethereum right now, which is the appropriate setup for a bottom to unfold at any time.

Ethereum's primary cycle breaks down into phases that include major cycles lasting 9-14 weeks and half-primary cycles lasting 12-20 weeks. We are in the 11th week of either the third and final major cycle phase or the second half-primary cycle. We are still in the time band for a primary cycle trough, as primary cycles last 25-41 weeks, and we have a cyclical overlap for a low now. Everything is lined up for a trough if it didn't happen already.

At a technical level, Ethereum just completed another lower-high, which presents issues with respect to the trend. It was rejected at former-support-turned resistance at 2000-2200 again last week. Prices continue to drop within the descending channel, which is bearish, too. It may fall to the 1600-1650 zone before buyers step back up. Note how the high last week occurred with the RSI indicator in corrective territory between 40-60, too.

Alternate Labeling: This week could start the 3rd week in a new primary cycle measured from the March 11 low at 1755.50.

Strategy: Position traders are long with stops on a daily close below 1870 now.

Aggressive traders are long with stops on a daily close below 1870 now.

Very Aggressive traders are long with a stop loss on a close below 1870 now.

ANNOUNCEMENTS

NOTE 1: "WHAT THE →?! IS HAPPENING? PART 2: An Astrological Interpretation of the Planetary Movements Now Underway" will take place on SUNDAY, APRIL 6, 2025, at 1:00 PM EDT. On January 25, MMA conducted a snap mini-webinar by Ray Merriman describing the geocosmic conditions unfolding at the time that correlated with the acceleration of confusion and uncertainty in the political and financial worlds. All the personal planets were in the beginning stages of what Ray called "retrograde chaos." Those back-to-back retrograde cycles would continue into mid-April. That period of retrograde chaos was an eerily accurate vision of what life would be like in the first 3-4 months of 2025. Now, the retrograde chaos interval is coming to an end, and we enter into stage 2 of a different type of turbulence when *all* the outer planets move into new signs between March 30 and July 7. This is the first time such a cosmic phenomenon has happened in 300 years — and before that, it occurred another 300 years ago. ~250331

What do these rare cosmic periods imply for individuals, world leaders, and the world at large? And what do they portend for certain financial markets? For instance, Gold and Silver made important lows just as Venus turned retrograde on March 2. Now, Gold is making new all-time highs, and Silver is making new yearly highs as Venus prepares to end its retrograde cycle in the next two weeks.

This 60- to 90-minute-long webinar will look at the charts of Gold, Silver, and the U.S. stock market. It will also examine the horoscope of President Donald Trump. Understanding these cosmic challenges can make the difference between stress or excitement about new opportunities looming ahead. Join Ray Merriman for an insightful look at these times. The cost is \$35. To register, [click here](#).

NOTE 2: The MMA Grain Cycles Report will be released this week. Written by top MMA Grains Analyst Wyatt Fellows, this monthly report is a must for those who trade or farm Soybeans, Corn, and/or Wheat, as Wyatt himself does. These reports are especially valuable now because of the approaching 36-year synodic (conjunction) cycle of Saturn and Neptune, which has shown a strong historical correlation to long-term cycles in all grain markets. This is considered a drought cycle. To subscribe to this excellent monthly report, [click here](#).

NOTE 3: THE MARCH ISSUE OF THE [MMA Monthly Cycles Report Plus+](#), edited by Pouyan Zolfagharnia, will also be released this week. This market letter has become a very popular addition to the MMA Cycles Report (it's less technical, more visual, and contains horoscopes of current importance, high-quality analysis, and updates on MMA Cycles Report markets). The mid-month addendum to the MMA Cycles Report covers Pouyan's outlook on Gold, Silver, NASDAQ, and Crude Oil. It has stunning graphics and charts (people love it!) and is very readable. It contains more illustrations and references to geocosmics than most MMA Cycles reports and is only available for subscription to those who also subscribe to the MMA Monthly Cycles Report. If you wish to try this month's addendum, along with the latest issue of the MMA Monthly Cycles Report, sign up online at the link above. Subscription for a monthly copy of both reports is \$55. That will give you both the most recent March copy of the MMA Cycles Report and the monthly MMA Cycles Report Plus+ addendum coming out this week. For further information and ordering instructions, please [click here](#).

NOTE 4: GET READY FOR MMTA4 REGISTRATION, WHICH STARTS APRIL 15!!! This is our highly regarded two-year educational and training experience — one that will change your life and the way you view financial markets. Yes, the course is challenging, but it is also incredibly exciting! With this course, you will

learn how to identify where the market is at any given point in time — and which trading or investing strategy to employ.

The eight-course program includes six or seven Zoom meetings per course (over 100 hours of live instruction and interaction) with instructor Wiebke Held and MMA analysts such as Pouyan Zolfagharnia, Gianni Di Poce, Ulric Aspghren, Kat Powell, Wyatt Fellows, and, of course, Raymond Merriman.

The classes will meet on Saturdays, 25 times per year, at noon EST, beginning September 13. There are one-month breaks between each course and a two- to three-month summer break. The program also includes at least one live, in-person (or optional online) weekend session, plus a voluntary review session after each course, held prior to the exam. There is nothing else as comprehensive in the field of market timing as the MMTA program! It covers MMA's market timing methodology for long- and intermediate-term investing as well as position and aggressive short-term trading.

Acceptance into MMTA requires an interview prior to enrollment. If you are interested in exploring whether MMTA is right for you, let us know, and we will schedule a time to talk.

Here are just a few of the many very positive reviews from graduates of the last MMTA3 program (2023-2024):

I wanted to express my deepest gratitude for generously sharing your knowledge and teaching. As you know, I am fairly new to trading and joined MMTA3 to learn a system for approaching the stock market. At the start of the year, I set a personal goal to double the money in my trading account — something I thought was impossible at the time. Thanks to the knowledge and tools taught in MMTA3, I was actually able to accomplish this goal! In fact, I even exceeded it. — W.H., Germany

Thank you, Ray and Gianni, for the fantastic course material and support. That is why I have made money — and every dollar spent on the courses has been paid back, and then some! — J.L., Netherlands.

This course was truly mind-blowing! I learned so much. Thank you all for sharing such excellent trading data and knowledge. This course is worth more than a college degree — at a fraction of the price, too. — K.L., Australia

NOTE 5: The NEW monthly MMA Technology Cycles Report by Wiebke Held was issued last week, on March 30. Wiebke's excellent two-year research papers were based on extensive studies of long-, intermediate-, and short-term cycles in the NASDAQ spot index (not futures). This report differs in style and substance from the other MMA monthly reports (it is more condensed and less technical). It provides an outlook not only for the NASDAQ but also for the QQQ (ETF) and specific technology stocks such as Microsoft, Google, NVIDIA, Tesla, and Apple. It will also include unique CRDs (critical reversal dates) specific to the NASDAQ, based on Held's meticulous research. To receive the current issue of this new report, sign up now for only \$35! Or save by ordering the three-report or twelve-report subscription by [clicking here](#).

NOTE 6: THE "[JUPITER REPORT](#)" — YOUR MOMENTS OF OPPORTUNITY — IS NOW AVAILABLE. This newest product, written by Raymond Merriman, is a 30- to 40-page report that all traders (and even non-traders) will find highly valuable. It identifies the times during the year when Jupiter transits are highlighted in your natal chart. It delineates the meaning of Jupiter's transits to your natal planets and angles over a 14-month period (including one month before your order and one month after the year

ends). As an added bonus, each transit is ranked on a scale from -3 to +3 in terms of favorability for trading. Traders may find this especially valuable! Would you like to know when you are under a +3 transit and, therefore, most likely to experience trading successes? Or a -3 transit with stronger-than-usual potential for misjudgments and losses? You betcha! The cost for your 14-month Jupiter Report is \$69. [Click here](#) to order!!!

NOTE 7: THE MMA Solar-Lunar App now offers reversal signals on the NASDAQ to all subscribers! The app now provides daily weighted values for four markets: the DJIA, NASDAQ, Gold, and Silver.

This app is an ideal tool to have in your back pocket if you are a short-term swing trader looking for high-probability dates that identify isolated lows and highs in the DJIA, NASDAQ, Gold, and Silver markets. It is available only on Apple products (iPhone and iPad) at this time, although we are getting close to developing it for Android phones as well, possibly by the end of this year.

To learn more about the MMA App, [click here](#). To order it, go to the Apple App Store and search for *Merriman Solar/Lunar Reversals*.

NOTE 8: The MMA Weekly [YouTube show](#), "Geocosmic Week in Review and Look Ahead," with Gianni Di Poce, is conducted on Wednesday evenings! Each 5- to 20-minute **FREE** episode reviews the previous week's market activity and offers a preview of the geocosmic signatures in effect for the coming week and beyond.

NOTE 9: MMA's Free Weekly Column Podcast Is Available on SPOTIFY, APPLE, and AMAZON! Now, you can listen to a podcast of this weekly column, narrated by Thomas Miller, each Saturday! Thomas has an excellent voice and brings the weekly column to life in a personable and, at times, humorous fashion. Just follow Merriman Market Analyst on Spotify or Apple to listen to all our episodes. A new podcast episode will be released every weekend. This is a **FREE** service and is available to everyone. Check out our podcasts on [Apple](#), [Spotify](#), and [Amazon Music](#). It makes for great listening!

EVENTS:

April 6: WHAT THE &%#@?! IS HAPPENING? PART 2: An Astrological Interpretation of the Planetary Movements Now Underway, a 60- to 90-minute-long special webinar on SUNDAY, APRIL 6, 2025, at 1:00 PM EDT. The cost is \$35. To register, [click here](#).

April 15, 2025: Registration opens for MMTA4, our two-year training program beginning September 13, 2025. The first course, Cycles — Market Cycles, will run for eight weeks and cover the most important principles that traders and investors need to know when identifying the optimal time bands for cycle highs and lows in most financial markets. This material forms the foundation of all MMA's trading and investment strategies. There is no astrology in Course 1; that occurs in Course 2. The coordinator for MMTA4 will be Wiebke Held, and we will soon announce our impressive faculty lineup. Stay tuned!

Disclaimer and using this information properly: Futures and options trading involve the risk of large losses as well as large gains.

Information is provided herein with sincere intent and according to MMA's original research studies and methodologies. These reports are provided mainly for "speculators." By its very nature, "speculation" means "willing to take risk of loss." "Speculators" must be willing to accept the fact that they are going to have losing trades, many more than, say, "investors." That is why they are "speculators." The way

"speculators" become profitable is not so much by a high percentage of winning trades but by controlling the amount of loss on any given trade, so the average trade on winners is considerably more than the average trade on losing trades.

MMA's comments, strategies, and data are given to serve as guidelines for traders for each day and/or week. Comments and strategies are based upon intraday and intraweek highs, lows, and closes at the end of the day or week. Traders are advised to use these only as guidelines - and use intraday analysis to establish positions in directions of comments given, so long as those support/resistance (entrance) areas) look favorable according to intraday analysis as well. Support and resistance are areas for day traders to look to buy and sell intraday. No guarantees are made for accuracy.

Support may represent favorable risk/reward places to buy if the trend is up. If prices trade below support, then have a close back above; it is considered a bullish "trigger" and oftentimes represents a good buy signal. Resistance may represent favorable risk/reward places to go short if the trend is down. If prices trade above it, then have a weekly close back below; it is considered a bearish "trigger" and oftentimes is a good sell signal.

By signing up for these reports, the reader agrees that he/she is solely responsible for any actions taken in markets, and neither the author, publisher, analyst or any person associated with MMA assumes any responsibility whatsoever for the reader's decisions.
