

MONTHLY GRAIN REPORT

June 24, 2026
VOL. 4, NO. 6
by Wyatt Fellows, MMA Analyst

REVIEW

All three grains took it on the chin last month, falling to levels not seen since earlier in the year. Corn and Wheat fared the worst, losing 16% and 17%, respectively, from the May highs. Soybeans gave back around 11%, which is not bad considering the increase in planted acreage this year. But we are fast approaching the critical time of year for Corn (pollination in July) and Soybeans (pod fill in August), which will ultimately make or break yields. A key piece of that puzzle will be revealed in the USDA's June 30 Planted Acreage and Grain Stocks Report. Historically, this report has triggered violent price reactions when the data have surprised the market. Traders need to be mindful of positions heading into next Tuesday.

News and Highlights

Grains, according to Grok:

The latest crop progress report, released Monday, June 22, showed:

Corn

- **Good to Excellent: 68%** (unchanged from last week; 2 points below last year's 70%).
- **Fair: 26%.**
- **Poor to Very Poor: 6%.**
- **Progress: 97% emerged** (on pace); **5% silking** (ahead of the 5-year average of 3%).

Soybeans

- **Good to Excellent: 66%** (unchanged from last week; same as last year).
- **Fair: 28%.**
- **Poor to Very Poor: 6%.**
- **Progress: 93% emerged** (ahead of the 5-year average of 90%); **9% blooming** (ahead of the 5-year average of 6%).

Winter Wheat

- **40% harvested nationwide** (across key states).
 - This is well ahead of both the 5-year average (~24%) and last year's pace (~18%).

The above data suggest there is no cause for alarm in the Corn and Soybean crops ... yet. However, there is a forecasted warm stretch beginning in July that may force the market to add some weather risk premium, depending on how high temperatures climb and how long the heat persists across the Grain Belt. Mid-July is when pollination in the U.S. Corn crop begins to reach critical mass, making weather conditions especially important.

The strong pace of the Wheat harvest is likely due to two factors. The first is that weather conditions have generally been dry and favorable across the Plains states as of late (aside from the deluge some areas experienced last week), allowing for an accelerated harvest pace. The second is undoubtedly the poor yields many producers are likely experiencing this year. When there is simply less crop in the field, it naturally takes less time to harvest.

CORN

Long- and Intermediate-Cycle Outlook

The longest cycle we analyze in the Corn market is an 18-year cycle. It last bottomed in 2020, but there is a legitimate argument that the correct starting year is 2016 instead. This makes 2026 either the 6th or 10th year of this long-term cycle. Currently, we are assigning the August 2024 low (which occurred during the first Jupiter–Saturn waxing square) as at least a 33-month cycle bottom. However, it is also likely a 4.6-year low, or possibly even a 9-year low, depending on the correct starting year for this 18-year cycle.

July will mark the 23rd month of the 33-month cycle, which appears to be unfolding in a three-phase pattern consisting of three 11-month cycles. The first 11-month bottom occurred with the August 2025 low, which was the 12th month measured from the August 2024 low, so it was right on time for a cycle of this length. The next 11-month bottom is due between May and September of this year, so we are now in the middle of the time band for another low to occur. The crest of this 11-month cycle occurred on May 13, when Corn reached 484.50. This was one day before the Sun conjoined Ceres in Taurus.

Last month's report stated, "If May 13 confirms as an 11-month cycle high, I am expecting the three-point upward-sloping trendline drawn off the August 15 low to be broken. In fact, the price target for the next 11-month low is 426.00 +/- 14.00. As long as Corn remains above 400.00 on a weekly closing basis,

the bullish bias will remain intact." This has now occurred, with Corn falling to a low of 406.25 on June 15, which is slightly below our price target but holding the 400.00 level. Based on our interpretation of the primary cycle, Corn could spend some time consolidating around the 400.00 level before the next rally gets underway. One positive development is that the weekly stochastics are now in oversold territory below 20. We will watch for a bullish crossover, with the %K line moving above the %D line, as initial confirmation that an 11-month low is in place.

Primary-Cycle Outlook and Price Projections

It appears the week of June 22 will begin the 23rd week of the 15- to 25-week primary cycle measured from the January 15 low of 433.50 in the July contract (we will be rolling to the December contract in next month's report). A low is due at any time within the next three weeks if it did not just form with the June 15 low. If it did, Corn is entering just the first week of a new and potentially bullish primary cycle. Initial confirmation that a bottom is in place will come with a rally back above the 20-day moving average. Stronger confirmation will come with Corn trading back above the 50-day moving average.

Major cycles in Corn typically last 5–8 weeks, while half-primary cycles typically last 8–12 weeks. My preferred outlook is that this primary cycle is breaking into two half-primary-cycle phases. The first bottom occurred on April 10 in the 12th week of the cycle, so while it was on the long side, it was still within the time band for a low to occur. June 22 will therefore start the 11th week of the second half-primary cycle, which is due to bottom anytime within the next two weeks unless, like the primary cycle, it bottomed on June 15, 10 weeks after the April 10 low.

Corn fell to 406.25 on June 15, which was slightly below the price target for a bullish 11-month-cycle low, but still above the psychologically important 400.00 price level. This low also occurred within an open chart gap identified by the pink horizontal lines on the continuous daily chart. This gap, between 403.75 and 409.25, should continue to offer support, although it is becoming increasingly likely that it will be completely filled before Corn turns higher. This price range, extending down to 400.00, will serve as the price target for a primary-cycle bottom. As noted, we entered this range last week. Should Corn close below 400.00 on a daily basis, the next price target for a bottom becomes 393.50 +/- 4.00.

Geocosmics

The following upcoming geocosmic signatures may influence the Corn market within a +/- 4-trading-day window:

Mercury turns retrograde on June 29

Mars conjunct Uranus on July 4

Sun square Saturn on July 6

Venus square Uranus on July 13

Jupiter opposite Pluto on July 20

Mercury turns direct on July 23

Saturn turns retrograde on July 26

Short-term solar-lunar reversal dates for the Corn market: These dates can correlate with isolated highs and lows from which the market may experience a reversal of 3% (preferably 6%) +/- 1 trading day. They are especially effective when they happen to coincide with the time band for one of the geocosmic signatures listed above. The more asterisks (*) next to each date, the greater the potential for a reversal.

July 2-3 ** (slight bias for lows)

July 11-12 *

July 13-14 * (slight bias for lows)

Summary

Corn is due for a primary cycle bottom at any time, with a chance it occurred on June 15. The price target for this low has been reached, but further downside remains possible should Corn break below the 400.00 level. It should be noted that even though a bottom may form soon, Corn could enter a period of consolidation, as current growing conditions remain very favorable for the U.S. Corn crop. I can

envision a scenario in which Corn bottoms and, after an initial rally, comes back to retest this low later in July or August.

Trading Strategies for Corn

Position traders were flat and were advised, *“Go long again at 445.00 $\pm$ 7.00 if offered in the July contract. If filled, set the stop loss on a weekly close below 433.00.”* We were in and out for a small loss. With the prospect of a primary-cycle low due soon, let’s try the long side again at 435.00 $\pm$ 5.00 in the December contract. If filled, set the stop loss on a weekly close below 400.00 and exit 1/3 at 465.00 $\pm$ 6.00.

Aggressive traders were short and were advised last month, *“Exit 2/3 at current levels and all at 447.00 $\pm$ 5.00. Traders may go long at this last price target with a stop loss on a weekly close below 433.00 for now.”* So, we banked excellent profits on the shorts but were stopped out for a small loss on the longs. Try the long side again at 435.00 $\pm$ 5.00 in the December contract. If filled, set the stop loss on a weekly close below 400.00 and exit 2/3 at 460.00 $\pm$ 5.00.

Producers: Last month’s report advised, *“This month, producers can look to buy some December 500.00 calls to make cash sales against should we get a late-summer rally going in this market. Try to buy them for 0.20 or less.”* December Corn fell further than expected, and those 500.00 calls traded as low as 0.08. Producers may wish to roll those 500.00 calls down to the 470.00 calls if it can be done for an additional cost of 0.05.

If you are uncomfortable trading futures and options, exposure to Corn can be obtained through the CORN ETF.

WHEAT

Long- and Intermediate-Cycle Outlook

Wheat has shown strong support at the double-bottom lows (around 493.00) of August 2024 and August/October 2025. It is my bias that these lows marked a 9-year-cycle trough in the Wheat market, measured from the 18-year-cycle bottom that occurred in 2016. After 18 months of sideways price action, Wheat has finally started to show signs of life, registering a series of higher highs and higher lows. If Wheat can trade back above the May 2024 high of 720.00, it will set the stage for a run to 1000.00 +/- 100.00. Wheat could reach this target by the end of this year, but a more realistic time frame would be early 2027.

July will mark the 23rd month of the 36-month cycle that bottomed in August 2024. The first 12-month-cycle low occurred in October 2025, which was in the 14th month (12-month cycles have a two-month orb) and therefore right on time. July will also mark the 9th month of the second 12-month cycle. It is not due to bottom again until August–December of this year and will likely coincide with the next primary-cycle bottom. More on this below.

Primary-Cycle Outlook and Price Projections

Preferred labeling (shown on the continuous daily chart): The week of June 22 will begin the 11th week of the 15- to 25-week primary cycle measured from the April 10 low of 567.50 in the nearby contract at the time. Major cycles in Wheat typically last 5–8 weeks, while half-primary cycles last 8–12 weeks. Following the sharp decline from the May 14 high, Wheat appears to have formed a half-primary-cycle low on June 15. This occurred in the 10th week of the cycle, making it right on time for a bottom to form.

Because the June 15 bottom formed above the start of the primary cycle (albeit just barely), a bullish rally above 688.25 remains possible in this second half-primary cycle. However, if the primary-cycle crest is in, this rally is likely to be corrective, with a bearish crest target of 629.75 +/- 14.00. Wheat entered the lower end of this range on June 18 and is now selling off. If that is all Wheat can achieve on the upside, then a target for a primary-cycle low becomes 545.00 +/- 17.00 over the next few months. If that level does not hold, Wheat could revisit the 500.00 level before bottoming.

Alternate labeling (shown on the July daily chart): The week of June 22 could begin the first week of a new 15- to 25-week primary cycle measured off the June 15 low of 571.00 in the July contract. The bottom would have formed in the 24th week measured off the previous January 2 primary-cycle low.

While on the later side of the time band, it was still on time. Prices have already tested the 52-day moving average for initial confirmation, but multiple daily closes above this moving average would be preferred before giving this scenario the benefit of the doubt. In this case, Wheat could be very bullish, with upside price targets well above 700.00.

The bottom line for Wheat is that 567.50–577.75 is critical support that must hold in order to keep the near-term bullish bias intact. If this support zone gives way, Wheat could struggle to gain bullish traction until later in the summer.

Geocosmics

The following upcoming geocosmic signatures may influence the Wheat market within a ± 4 -trading-day window:

Mercury turns retrograde on June 29

Mars conjunct Uranus on July 4

Sun square Saturn on July 6

Venus square Uranus on July 13

Jupiter opposite Pluto on July 20

Mercury turns direct on July 23

Saturn turns retrograde on July 26

Short-term solar-lunar reversal dates for the Wheat market: These dates can correlate with isolated highs and lows from which the market may experience a reversal of 3% (preferably 7%) within ± 1 trading day. They are especially effective when they coincide with the time band of one of the geocosmic signatures listed above. The more asterisks (*) next to a date, the greater the potential for a reversal.

July 9–10 **

July 11–12 ** (bias for lows)

July 13–14 * New Moon

July 22 *

Summary

Wheat is currently between two possible primary-cycle labelings, depending on whether one is analyzing the continuous chart or the front-month July futures chart. Either could be correct at this point. In the more bullish scenario, Wheat could be readying for a move above 700.00. However, if support at 567.50 is taken out, Wheat has downside risk back to 500.00. Currently, my lean remains slightly bearish into late July and August.

Trading Strategies for Wheat

Position traders are long with a stop loss on a daily close below 575.00. Exit 1/3 at 630.00 +/- 7.00 if offered. Keep the same stop loss.

Aggressive traders are long with a stop loss on a daily close below 575.00. Exit 1/3 at 629.00 +/- 7.00 and another 1/3 at 644.00 +/- 7.00 if offered. Keep the same stop loss.

Producers should be sitting well after having made a cash sale above 680.00 in the July contract. We will wait to see whether or not we get a late-July low to reown previous sales.

If you are uncomfortable trading futures and options, exposure to Wheat can be obtained through the WEAT ETF.

SOYBEANS

Long- and Intermediate-Cycle Outlook

July will begin the 23rd month of the 34-month cycle measured from the August 2024 low. It is currently my bias that the August 2024 bottom was also the first 5.5-year low measured off the most recent 17-year-cycle bottom in May 2019. The technical trend continues to look supportive, with a series of higher highs and higher lows being established.

It appears that this 34-month cycle is breaking down as a combination pattern of three 11-month cycles (a three-phase pattern) and two 17-month half cycles (a two-phase pattern). The August 6, 2025, low occurred in the 12th month following the August 2024 bottom. This was the first 11-month cycle and bottomed right on time (labeled “B1” on the weekly chart). Soybeans then had a strong rally and another steep decline into the January cycle low (labeled “D1”). This occurred in the 17th month and right on time for a low of this cycle length. Measured from the August 2025 low, the next 11-month cycle is due now, or anytime between May and September. There is a chance that the low formed with the recent June 15 low, but this depends on whether or not Soybeans were still in an older primary cycle measured from the January 17-month cycle bottom.

As mentioned in last month’s report, “After rallying up to 1235.00 on May 13, in what looks like a double-top formation on the weekly chart, Soybeans may be ready to start a decline into the next 11-month cycle low. The price target for such a low would be 1100.00 +/- 33.00.” Spot on. Soybeans fell sharply from this high, hitting a low of 1102.50 on June 15. If that was the low, Soybeans should be well supported above 1100.00 moving forward. Any breach of this price level would signal that the 11-month-cycle low is still ahead, with 1064.00 +/- 10.00 as the next likely support level. On the positive side, the weekly stochastics have reached oversold territory and are just starting to curl back up. This has occurred at previous lows before strong rebounds ensued.

Primary-Cycle Outlook and Price Projections

Preferred labeling: June 22 begins the 11th week of the primary cycle, measured from the April 8 low of 1056.75 in the July contract. The primary cycle has turned bearish as price has broken below the April 8 low. This implies lower prices for Soybeans before the next bottom is due in 5–11 weeks, which will likely coincide with the next 11-month-cycle low discussed above.

Major cycles in Soybeans typically last 5–7 weeks, while half-primary cycles typically last 8–11 weeks. The phase breakdown of this primary cycle is subject to some interpretation. The June 15 low could have marked the end of the second major cycle, with June 22 starting the first week of the third and final major cycle. In that case, it would be due to bottom in accordance with the primary cycle in 5-7 weeks. However, last week’s low occurred in the 10th week, so it was right in the time band for a half-primary-cycle low,

with the next bottom not due for another 8–11 weeks. While both counts could be correct, I currently prefer the three-phase breakdown.

Assuming this labeling is correct, the downside price target for the final major-cycle low, which should also coincide with the primary-cycle low, is 1058.75 +/- 21.00. Notice the overlap with support for the 11-month-cycle low.

Alternate labeling: June 22 could mark the first week of a new primary cycle measured off the June 15 low of 1102.50. The previous primary cycle would have bottomed in the 24th week, meaning it expanded by a few weeks. This implies that June 15 could have also been an 11-month-cycle low, as shorter cycles can and do distort when longer-term cycles are due. I also like the bullish oscillator divergence that developed between price and the CCI at the low. If this labeling proves out, Soybeans could be quite bullish over at least the next 2–5 weeks. In this scenario, we would want to see at least a test of the 45-day moving average. That moving average is currently near 1175.00 and falling.

Like Wheat, either primary-cycle labeling could be correct at this time. The key will be whether Soybeans can remain above the June 15 low over the next few weeks. If so, the odds would shift significantly in favor of this being a new primary cycle, with an initial upside price target of 1168.75 +/- 15.00. However, if this truly is a new 11-month cycle as well, a rally above 1235.00 would be expected.

Geocosmics

The following upcoming geocosmic signatures may influence the Soybean market within a +/- 4-trading-day window:

Mercury turns retrograde on June 29

Mars conjunct Uranus on July 4

Sun square Saturn on July 6

Venus square Uranus on July 13

Jupiter opposite Pluto on July 20
Mercury turns direct on July 23
Saturn turns retrograde on July 26

Short-term solar-lunar reversal dates for the Soybean market: These dates can correlate with isolated highs and lows from which the market may experience a reversal of 3% (preferably 6%) +/- 1 trading day. They are especially effective when they coincide with the time band of one of the geocosmic signatures listed above. The more asterisks (*) next to a date, the greater the potential for a reversal.

June 24–26 * (strong bias toward crests)
June 29 * (strong bias toward crests; Full Moon and Mercury retrograde)
July 7–8 * (bias toward lows)
July 11–12 * (bias toward lows)
July 22 * (bias toward crests)

Above is the 2026 Venus chart for Soybeans, derived from Timing Solutions. It shows what the price of Soybeans typically does as Venus moves through the zodiac. The chart represents only the trend and potential turning points; it does NOT reflect the magnitude of the price moves. By and large, the chart has been fairly accurate in forecasting the general direction of Soybeans, with a move up from January of this year to a top around late April into May, followed by a strong decline into the June/July period. The June 15 low fits this pattern, with a rally now forecasted into early July (watch the Mars–Uranus conjunction), followed by another bottom at the end of July, possibly extending into August. This will be our general road map through the summer months.

Summary

Like the Wheat market, Soybeans have two possible primary-cycle labelings. The Venus chart supports both outlooks, suggesting either that a primary-cycle low formed in June and will be retested after a modest rally, or that Soybeans are on their way to new lows ahead of a primary-cycle bottom toward the end of July. In either case, this market should be accumulated on any declines into July and August.

Trading Strategies for Soybeans

Position traders are now fully long again with a stop loss on a weekly close below 1064.00. Exit 1/3 at 1168.00 +/- 10.00.

Aggressive traders are long with a stop loss on a weekly close below 1064.00. Less risk-averse traders can move the stop loss up to a close below 1100.00. If stopped out, look to go long again at 1070.00 +/- 10.00. In either case, exit 2/3 at 1168.00 +/- 9.00.

Producers are sitting well, having made cash sales in May before the drop. Sit tight until we see how the primary cycle shakes out over the next month or two.

If you are uncomfortable trading futures and options, exposure to Soybeans can be obtained through the SOYB ETF.

The next MMA Monthly Grain Report will be released on July 22, 2026.

ANNOUNCEMENTS & EVENTS

ANNOUNCEMENTS

NOTE 1: ONE MORE DAY!!! [THE ANNUAL MMA MID-YEAR MARKET WEBINAR](#) WITH MMA MARKET ANALYSTS WILL TAKE PLACE ON SATURDAY, JUNE 20, AT 1:00 PM EDT!!! This year's webinar will be in a different and more interactive format than previous ones. It will be hosted by Raymond Merriman, who will introduce each market and then conduct an interactive interview with the MMA analyst covering that market, discussing its outlook for the second half of 2026. The analysts and markets to be covered this year will include NASDAQ (Wiebke Held), the DJIA (Gianni Di Poce), the Euro (Ulric Aspegren), Bitcoin (Ray Merriman), Silver and Crude Oil (Pouyan Zolfagharnia), and Gold and T-Notes (Wyatt Fellows). This webinar/workshop will last approximately three hours, with two five-minute breaks. The cost is \$66 (a super bargain for a workshop covering these markets), which includes access to the live presentation via Zoom, the presentation slides, and the video recording of the live event within 24 hours after the presentation. This is MMA's annual mid-year market update webinar. If you are unable to attend live, the video recording will be available the following day. To register, [click here](#).

NOTE 2: A SIX-WEEK SUMMER SCHOOL COURSE ON ESOTERIC ECONOMICS: THE HIDDEN ARCHITECTURE OF WEALTH, BY GIANNI DI POCE, WILL BEGIN ON SUNDAY, JULY 12. This immersive, six-week online course is the complete companion to *Esoteric Economics*, the financial astrology textbook written by [Gianni Di Poce](#). The course touches on conventional economics, but also reveals the deeper, often invisible currents that truly govern wealth: archetypal forces, temporal rhythms, capital flows, and the ancient principles that have shaped civilizations for millennia. The course blends rigorous historical and technical analysis with esoteric insight, practical tools, and visionary thinking. You will not simply study economics here—you will be initiated into its hidden language and learn to navigate it with clarity, confidence, and creative power. The cost for this six-week course is \$300. Registration is now open! Click [here](#) to register.

NOTE 3: PRICE INCREASE FOR [MMA DAILY OPTIONS REPORT](#) WITH DEREK ON JULY 1. SIGN UP NOW TO LOCK IN CURRENT PRICES. This is currently MMA's hottest subscription report, and for good reason: it has been incredibly successful since it was launched on January 15, 2026, at special introductory rates of \$360/month or \$3600/year. Those prices will increase to \$420/month and \$4200/year as of July 1. However, for those who sign up for automatic renewal, the current rates will be honored (loyalty offer) until the subscription is canceled, at which time these new rates will be applied. **Sign up now and lock in the introductory rates for the long term!**

This new daily options service focuses on the S&P, Gold, Copper, T-Notes, Soybeans, and Bitcoin, plus other markets when special situations arise that would benefit from options strategies. The service includes intraday updates as necessary, sometimes multiple times per day, depending on market conditions. Ray Merriman also provides commentary within this new daily service. *In fact, this is where Ray has been spending most of his time on trading strategies in 2026.*

For those who also subscribe to the current MMA Daily Report, which is issued at the end of each trading day for the next trading day, the cost of adding Derek's new Daily Options Report will be \$600 per month or \$6000/year. For more information on this new service, or to pre-register, [click here](#). Order now at the special launch price to get in on the action of options trading if you are an active trader!

NOTE 4: COMING SOON: RAY MERRIMAN'S NEW BOOK ON ["JUPITER AND SATURN TRANSITS: MASTERING THE CYCLES OF LIFE."](#) This is NOT the book you would expect from Ray Merriman. But it is a book you will need, use, and value for the rest of your life if you study astrology, and especially if you are also a trader. This 400+ page book covers all the major transits of Jupiter to one's natal planets and angles, including interpretations of the opening and closing sextile, square, and trine aspects. The Saturn section also includes the opening and closing semi-square and sesquiquadrate transits to all natal planets and angles, plus the "Business Cycle" of transiting Saturn. Each transiting aspect is ranked from -3 to +3 in terms of trading and investment potential, which alone is worth the price of the book.

Here are early reviews by two of the world's leading astrologers after receiving an early draft of this book:

Ray Merriman surprises us with a new book on transits! The book covers the delineation of planetary aspects of two of the most important traditional planets: the classical supportive and encouraging Jupiter aspects on the one hand, and the restrictive but also stabilizing Saturn aspects on the other. The descriptions of transits by an experienced and renowned astrologer are, together with his recommendations, of immense value. Going beyond the symbolic meaning of planetary combinations, Ray Merriman draws on his rich experience with planetary transits to provide the reader with practical interpretations and useful recommendations. To these, he adds advice for investors and traders in order to enable them to make the most of specific transits. A highly recommendable and easily understandable book about transits for modern readers interested in the way astrology works in daily life.

- Claude Weiss, author, teacher, and owner of AstroData, Zurich, Switzerland, as well as one of the most highly respected mundane astrologers in the history of astrology.

Ray Merriman's Transits of Jupiter and Saturn: Mastering the Cycles of Life is beautifully and fluidly written, and we know from the first chapter that we are in the hands of a master with his experience of astrology honed over decades. I loved his descriptions of the Jupiter and Saturn cycles in our lives, detailing the transits to all of the personal planets in one's birth chart. Even being an experienced astrologer myself, I learned a lot through these descriptions in terms of how these transits affect us personally. However, what is unique about this book is that Ray has also written it through the lens of financial market investment potential and timing for each aspect, also differentiating between waxing and waning aspects, which was fascinating. He has used a scale of positive and negative potential for each aspect, also drawing a distinction between that potential for traders and investors. This is invaluable advice. I highly recommend this book to all budding and more experienced astrologers. Thank you, Ray, for this unique contribution!

- Pam Gregory, prominent British astrologer, bestselling author (*How to Co-Create Using the Secret Language of the Universe* and *You Don't Really Believe in Astrology, Do You?*), and host of a widely followed YouTube channel.

The cost for this book is \$39.99. However, those who order now, prior to the actual printing of the book, due in mid-August, will receive the special pre-publication price of \$33.00 (plus postage for the printed edition; no postage is required for the eBook version). To order at the pre-publication price, click [here](#).

NOTE 5: THE [JUPITER REPORT: YOUR MOMENTS OF OPPORTUNITY!](#) The *Jupiter Report* is written by Raymond Merriman. It is a 30- to 40-page report that all traders (and even non-traders) will find highly valuable. It identifies the times during the year when Jupiter transits are highlighted in your natal chart and explains the meaning of Jupiter's transits to your natal planets and angles over a 14-month period (including one month before your order date and one month after the year ends). *As an added bonus, each transit is ranked on a scale from -3 to +3 in terms of favorability for trading. Traders may find this*

especially valuable! Would you like to know if you are under a +3 transit and therefore most likely to experience trading success? Or a -3 transit, with a stronger-than-usual potential for misjudgments that can be costly? The price for a personal 14-month *Jupiter Report* based on your birth data is \$69.

Coming soon! *The Saturn Report: Mastering Your Life Cycles*. Due out in late summer or early fall.

NOTE 6: THE [MMA SOLAR-LUNAR APP](#) OFFERS REVERSAL SIGNALS FOR THE DJIA, NASDAQ, GOLD, AND SILVER. It is an ideal tool to have in your back pocket if you are a short-term swing trader looking for high-probability dates that identify isolated lows and highs in these markets. Please note that this should not be used as a standalone system. It works best as an adjunct tool when cycle lows or highs are due, when a market is in a technically overbought or oversold condition, or when it is exhibiting intermarket bullish or bearish divergence relative to a related market. The app is currently available only on Apple devices (iPhone and iPad). *HOWEVER, IT WILL SOON BE AVAILABLE BY SUBSCRIPTION ON THE NEW MMA WEBSITE TO EVERYONE, INCLUDING USERS OF ANDROID PHONES, AROUND JULY 4TH!* **To learn more about the MMA app, [click here](#).** To order on your iPhone, go to the Apple App Store and search for *Merriman Solar/Lunar Reversals*.

EVENTS

SEPTEMBER 3, 2026: A UAC PRE-CONFERENCE WORKSHOP ON FINANCIAL ASTROLOGY BY RAYMOND MERRIMAN, 1:00–5:00 PM. This workshop will take place at the United Astrology Congress (UAC), the largest astrological conference in the world, which is held every four to eight years. More than 150 world-class astrologers will be presenting, and over 1500 attendees will be present. The conference will be held at the Marriott Downtown Chicago Magnificent Mile Hotel. In addition to the workshop, Ray will present another lecture during the six-day event on mundane astrology, titled "What Is Happening in the World from an Astrological Viewpoint," on September 5. **For more information, visit www.uacastrology.com.**

Disclaimer and proper use of this information: *Futures and options trading involve the risk of large losses as well as large gains.*

Information is provided herein with sincere intent and according to MMA's original research studies and methodologies. These reports are provided mainly for "speculators." By its very nature, "speculation" means "willing to take the risk of loss." "Speculators" must be willing to accept the fact that they are going to have losing trades, many more than, say, "investors." That is why they are "speculators." The way "speculators" become profitable is not so much by a high percentage of winning trades but by controlling the amount of loss on any given trade, so the average trade on winners is considerably more than the average trade on losing trades.

MMA's comments, strategies, and data are given to serve as guidelines for traders for each day and/or week. Comments and strategies are based upon intraday and intraweek highs, lows, and closes at the end

of the day or week. Traders are advised to use these only as guidelines - and use intraday analysis to establish positions in the directions of comments given, so long as those support/resistance (entrance) areas. Looks favorable according to intraday analysis as well. Support and resistance are areas for day traders to look to buy and sell intraday. No guarantees are made for accuracy.

Support may represent favorable risk/reward places to buy if the trend is up. If prices trade below support, then have a close back above; it is considered a bullish "trigger" and oftentimes represents a good buy signal. Resistance may represent favorable risk/reward places to go short if the trend is down. If prices trade above it, then have a weekly close back below; it is considered a bearish "trigger" and oftentimes is a good sell signal.
