

Green Mother Nature

Dew drops

and plops

on the grounds.

While ants have colonies on mounds.

Trees grow way up high,

With its branches reaching towards the sky.

The trees of maple, evergreen, birch,

make room for birds to perch.

Predators lurch

From bush to bush,

Pick their prey and wait to ambush.

Many animals,

Reptiles, amphibians, birds, and mammals

Live together

In parts of Mother Nature.
