

2019 **CORE** to Characterization WORKSHOP

AER CORE RESEARCH CENTRE

OCTOBER 3, 2019

CALGARY, AB CANADA

Workshop Overview

In conjunction with the 2019 SPE Annual Technical Conference and Exhibition, the CSPG is conducting a one-day core workshop focused on refining and improving reservoir characterization and geomodel inputs using information gathered from core.

Engineers and geologists will demonstrate how basins and reservoirs can be better characterized by using examples from Montney, Oil Sands, Source Rock Plays and Tight Sands plays. This workshop will cycle all participants through a series of sessions each focused on the challenges facing specific play types. Attendees will benefit from having these concepts and applications presented by experts from industry and academia.
