Prosthetic Technology RESEARCH

For Individuals with Lower Limb Amputation

Do you have a **leg amputation** of one or both legs?
(Amputation between the ankle and hip)
Are you over age 18?

If you answered yes to both of these questions, please consider calling our study coordinator to discuss your qualifications and participating in our lower limb research project.

Why are we doing this study? In this study researchers at the University of Pittsburgh are developing a device that stimulates nerves with the goal of producing sensations that feel like they come from the amputated limb.

What will I do in this research study? You will participate in one or two study visits for pre-surgical screening, one visit for electrode placement and testing, up to 20 visits for testing, and a final visit for electrode removal. You will be compensated $50 for each visit you attend with the maximum compensation of $1250 for all study visits.

Please contact our study team at **412-648-4035** for information.
