

League of Wisconsin Municipalities Tool Kit for Implementing Municipal Safer at Home Restrictions

When the Wisconsin Supreme Court struck down DHS's Emergency Order 28, Safer at Home, as invalid and unenforceable on May 13, local governments were presented with the question of whether to adopt and enforce local safer at home restrictions to quell the spread of COVID-19 within their communities and to ensure local health facilities have adequate capacity for dealing with COVID patients. Municipalities without a health department must abide by any safer at home restrictions imposed by the county health officer. If the county health officer has not issued a county safer at home order, municipal policymakers have the discretion to issue safer at home orders to prevent or minimize the spread of COVID-19 within their communities, pursuant to their emergency powers under Ch. 323. While most communities as of early summer 2020 have decided not to enact local safer at home orders, the League has prepared this Local Safer at Home Tool Kit in case circumstances change in the future and local policymakers become interested in adopting safer at home orders to address a surge in COVID-19 cases within their community. The Toolkit explains municipal authority to adopt and implement safer at home restrictions, includes sample local safer at home orders, and provides links to county level COVID-19 data and metrics to support local safer at home orders. (Updated 6-15-2020)

1. Municipal authority to issue local safer at home orders
