### III. Facility Eligibility

In general a facility must be determined eligible in order for work to be eligible. There are exceptions for some emergency work activities as shown in Figure 7 and discussed in Chapter 2:VI.

A facility is a building, works, system, or equipment, built or manufactured, or an improved and maintained natural feature.\(^{65}\)

An example of a system that qualifies as a facility is a water distribution system. Mechanical, electrical, plumbing, and other systems that are components of a facility in which they operate are considered part of that facility.

A natural feature is improved and maintained if it meets all of the following conditions:

- The natural feature has a designed and constructed improvement to its natural characteristics, such as a terraced slope or realigned channel
- The constructed improvement enhances the function of the unimproved natural feature
