

Dr. Al Roberts, President of Southside Virginia Community College had this to say about Fluor:

Fluor specializes in capital efficient and innovative solutions for engineering and construction projects. The company, which manages major construction endeavors around the world, arrived in Southside Virginia to build two state-of-the-art power generation stations for Dominion Virginia Power. Fluor's commitment to sustainability includes building long-term relationships to enhance the local communities where it operates. Southside Virginia Community College (SVCC) and its students have benefited from Fluor's investments in the economic growth of our region and in higher education. In addition to funding scholarships to enable students to embark on careers in high-demand fields, Fluor, working alongside AMECO and Dominion Virginia Power, also supported the funding and development of a new welding lab at the Southside Virginia Education Center in Greensville County. SVCC offers sincere thanks for Fluor's generosity and stewardship.

Leadership in Philanthropy Past Recipients
