**OUR
PATHWAY**
TO CARING FOR THE ENVIRONMENT

Our pathway to a more sustainable future...

Pathway Lighting is shifting away from wasteful packaging to eco-friendly package designs. When we ship, you'll see cardboard cutouts designed to fit more of our products per box – and no plastic or environmentally-destructive fillers. Fewer boxes and less stuffing diminish our carbon footprint, making your job sites less messy by decreasing the amount of post-construction debris.

It's just one more step we're doing to care for our environment now and for future generations.

Earth Hour is Saturday, March 30, 2019; 8:30pm

"I developed these package designs for our fixtures with the goal to minimize material waste using the most biodegradable material available, yet still ensuring maximum protection during shipping," said Todd Guertin, Engineering & Manufacturing Manager at Pathway Lighting. "This saves both time and money – and the cardboard can be easily recycled. It's a win-win for everyone."

Todd has been with Pathway since 1999, and has created some of our most popular fixture designs, including the Industriale Series. [Click Here for Brochure](#)
