

## What to do if you have confirmed or suspected coronavirus disease (COVID-19)

If you are sick and have been diagnosed with COVID-19 or suspected to have COVID-19 because you have been exposed to someone with COVID-19, follow the steps below to help prevent the disease from spreading to people in your home and community.

### **Symptoms of COVID-19**

The most common symptoms of COVID-19 are fever, cough and shortness of breath. If you have been exposed to someone with laboratory confirmed COVID-19 and are experiencing fever with either cough or shortness of breath, you might have COVID-19. You can contact your doctor to see if you need to be tested. If you have tested positive for COVID-19 or are suspected to have COVID-19 but are not tested, you should follow the below instructions.

### **Stay home except to get medical care**

You should restrict activities outside your home, except for getting medical care. Do not go to work, school, or public areas. Avoid using public transportation, ride-sharing, or taxis.

### **Separate yourself from other people and animals in your home**

- **People:** As much as possible, you should stay in a specific room and away from other people in your home. Also, you should use a separate bathroom, if available.
- **Animals:** You should restrict contact with pets and other animals while sick. When possible, have another member of your household care for your animals while you are sick; if you must care for your pet, wash your hands before and after you interact with pets and wear a facemask.

### **Call ahead before visiting your doctor**

If you have a medical appointment, call the healthcare provider and tell them that you have or may have COVID-19. This will help the healthcare provider's office take steps to keep other people from getting infected or exposed.

### **Wear a facemask**

You should wear a facemask when you are around other people (e.g., sharing a room or vehicle) or pets and before you enter a healthcare provider's office. If you are not able to wear a facemask (for example, because it causes trouble breathing), then people who live with you should not be in the same room with you, or they should remain at least six feet from you while you cover your cough and wash your hands frequently.

## What to do if you have confirmed or suspected coronavirus disease (COVID-19)

### Cover your coughs and sneezes

Cover your mouth and nose with a tissue when you cough or sneeze. Throw used tissues in a lined trash can; immediately wash your hands with soap and water for at least 40 seconds or clean your hands with an alcohol-based hand sanitizer that contains at least 60 to 95% alcohol, covering all surfaces of your hands and rubbing them together until they feel dry. Soap and water are preferred if hands are visibly dirty.

### Avoid sharing personal household items

You should not share dishes, drinking glasses, cups, eating utensils, towels, or bedding with other people or pets in your home. After using these items, they should be washed thoroughly with soap and water.

### Clean your hands often

Wash your hands often with soap and water for at least 40 seconds. If soap and water are not available, clean your hands with an alcohol-based hand sanitizer that contains at least 60% alcohol, covering all surfaces of your hands and rubbing them together until they feel dry. Soap and water are preferred if hands are visibly dirty. Avoid touching your eyes, nose, and mouth with unwashed hands.

### Clean all “high-touch” surfaces every day

High touch surfaces include counters, tabletops, doorknobs, bathroom fixtures, toilets, phones, keyboards, tablets, and bedside tables. Also, clean any surfaces that may have blood, stool, or body fluids on them. Use a household cleaning spray or wipe, according to the label instructions. Labels contain instructions for safe and effective use of the cleaning product including precautions you should take when applying the product, such as wearing gloves and making sure you have good ventilation during use of the product.

### Monitor your symptoms

Seek prompt medical attention if your illness is worsening (e.g., difficulty breathing). **Before** seeking care, call your healthcare provider and tell them that you have, or are being evaluated for, COVID-19. Put on a facemask before you enter the facility. These steps will help the healthcare provider’s office to keep other people in the office or waiting room from getting infected or exposed.

## What to do if you have confirmed or suspected coronavirus disease (COVID-19)

### **Ask your healthcare provider to call the local or state health department to discuss your situation.**

Persons who are placed under active monitoring or facilitated self-monitoring should follow instructions provided by their local health department or occupational health professionals as appropriate. When working with your local health department check their available hours.

If you have a medical emergency and need to call 911, notify the dispatch personnel that you have, or may have COVID-19. If possible, put on a facemask before emergency medical services arrive.

### **Discontinuing home isolation**

Patients with confirmed COVID-19 should remain under home isolation precautions until the risk of secondary transmission to others is thought to be low.

- Discontinuation of home isolation for patients with confirmed COVID-19 disease are made on a case by case basis.
- If you have tested positive for COVID-19, you should remain under home isolation until you have had two negative tests and have consulted with your healthcare providers and/or state health department.
- If you have fever with cough or shortness of breath but have not been exposed to someone with COVID-19 and have not tested positive for COVID-19, you should stay home away from others until 72 hours after the fever is gone and symptoms get better.
