Re: 003250W Roof Screw Update

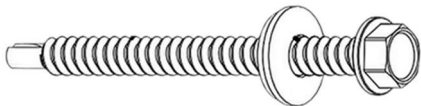

Dear valued customer,

In response to customer feedback and our ongoing commitment to product improvement, we are pleased to announce an enhancement to our wood decking screws. The current **003250W – #12-14 x 2.50 SCREW HDW SS SD** is being replaced by the new **003251W – DTD #14 x 3" SELF-DRILL SCREW**.

The updated screw provides a superior installation experience with reduced risk of stripping and improved structural performance. It features a sharper point for easier piercing of composition shingles and a more aggressive thread geometry for stronger holding power. The 3/8" bolt head aligns with other Unirac products, including BUTYL attachments and SOLOBOX™, ensuring consistent tooling across systems.

The new 003251W screw is fully backward compatible and may be used interchangeably with the previous 003250W in existing designs. Unirac's span charts and design tools will transition to the new screw over the coming months, with many applications benefiting from improved spans.

Screw Identification and Installation Tools:

	
003250W #12-14 X 2.50 SCREW HDW SS SD	003251W - DTD #14 3IN SELF-DRILL SCREW
Requires: 5/16" drive socket	Requires: 3/8" drive socket

Effective immediately, all current and future purchase orders for **003250W** will be fulfilled with the new **003251W**. During this transition, Flashloc DUO will continue to ship with (2) of the 003250W screws included per attachment.

Thank you for your continued trust in Unirac products.

Keegan Sutanto
