# DIY Stream Bank Repair

## Stabilization practices for small backyard streams

Clemson's Stream Bank Repair program works with homeowners, land managers, park staff, and landscape professionals to address unhealthy stream banks that are suffering from erosion and instability. This workshop will highlight practices to help stabilize and revegetate stream banks. Participants will go home with new skills and resources to address stream erosion issues.

Participants will learn about:

- Establishing a 3:1 bank slope
- Installing erosion control mats
- Installing native vegetation using livestakes

This workshop includes hands-on practice along a small stream. Participants should dress for the weather and wear waterproof boots if possible. Some equipment is available to borrow.

Should you require special accommodations due to a disability, please notify our office ten days prior to the event.
