

## **Pixel by Labcorp COVID-19 PCR Test Home Collection Kit**

Pixel by Labcorp COVID-19 PCR Test Home Collection Kit - Received FDA Emergency Authorization for Ages 2-17. Labcorp Becomes First Major Commercial Lab to Offer a COVID-19 PCR Test Home Collection Kit for Children 2 Years and Older. The authorization expands the use of Pixel by Labcorp to children and adolescents 2 years of age and older when purchased by a parent or guardian.

“Expanding access of our Pixel by Labcorp COVID-19 Test Home Collection Kit to include younger populations fills an important need as people seek to resume life activities safely,” said Brian Caveney, M.D., chief medical officer and president of Labcorp Diagnostics. “This is welcome news as children and parents look forward to summer activities, camps, travel and the upcoming school year.”

Pixel by Labcorp COVID-19 PCR Home Collection Kit uses the same PCR test trusted by doctors and hospitals across the country. Individuals age 14-17 can self-collect with adult supervision, and children between the ages of 2 and 13 will need adult assistance to collect their sample.

Beginning in late May, parents and guardians can request a kit for children 2 years of age and older directly through [www.pixel.labcorp.com](http://www.pixel.labcorp.com). Once the request is received by Labcorp, a kit will be shipped to the individual’s home via FedEx. For adults 18 and over, the Pixel by Labcorp COVID-19 PCR Test Home Collection Kit is also available in over 6,000 pharmacies nationwide.

Labcorp offers its Pixel by Labcorp COVID-19 PCR Test Home Collection Kit for zero upfront costs when clinical guidelines are met. Visit Labcorp’s COVID-19 website to learn about the company’s testing and drug development offerings.
