

K2's Excel Magic Part V

Course Description

Excel has more than 300 functions, many of which are unknown by most accounting and finance professionals. This Excel Magic session will start you on the path to improved Excel productivity by introducing you to powerful and time saving but little used Excel functions. It's time for you to break out of your Excel cocoon.

Some of these little used functions can calculate depreciation, mortgage interest and principal reduction. Among other topics, you will learn about logical and conditional formulas, including Boolean operators; advanced financial formulas such as PV and NPV; innovative uses for Excel's date functions, and the power of basic array formulas.

Learning Objectives

- Making advanced calculations with Excel's financial functions
- Using array formulas to make calculations on a range of items
- Building date and time calculations

Enhancing Your Tax Practice with Intuit Profile

Course Description

ProFile is Canada's #1 professional tax software application. This year, we're introducing new features and enhancements to help you collaborate more efficiently with your clients and streamline your workflow.

Learning Objectives
