

Room One

Head Teacher – Steph

We have been having a great time in Room One. Our cherubs are growing in leaps and bounds. As your children grow so do their interests and needs. We are always taking note, adjusting the environment, and offering learning experiences to extend and develop the children. There has been a great emphasis on fine motor and gross motor skills.

Many of our planned learning experiences have been focusing on supporting all aged children in developing these skills.

Many of the children have become climbing and balancing masters. They have not only learnt about how their body moves and how to control it, they are learning to trust within themselves and feel empowered to give things a go. They problem-solve and try again if it didn't go as they first thought it would.

Others are greatly developing their pincer grip, hand coordination and stability. We have seen this through the children adding detail and more refined shapes to their painting and drawing, using smaller painting utensils or pens, posting and threading many beads for our long-awaited mobile.

In Room One we absolutely love that the children are curious and like to explore all areas of play; each child takes something different from an experience. Having a large variety of play areas and tools support the children in developing their own ideas, replaying or revisiting an experience and building on their knowledge and skills.

“PLAY IS THE HIGHEST FORM OF RESEARCH” Albert Einstein

If you have any questions I always have time for you.

Take care

Steph x
